Part I: Strategic Inquiry

1. Part I: Executive summary

Product insights

- MYCOMM offers all-inclusive sports-event travel packages (tickets, hotel, transport, optional add-ons) for events like Six Nations, F1, Tour de France, and Champions Cup finals.
- Positioned mid-to-premium, the packages simplify planning, guarantee event access, and deliver memorable experiences.

Market insights

- MYCOMM is well-positioned in the European mid-market sports travel segment.
- Direct competitors include other sports travel agencies, either specialized in specific sport or regions; indirect competition includes ticket-only resellers.
- MYCOMM's advantages: multilingual support, mid-market pricing, local expertise for French-speaking audiences. Gaps: luxury segments and English-speaking international markets.

Website insights

- Website supports product-aware users; content is mostly transactional, with limited early-stage guidance.
- Organic search drives most traffic; email and referral channels yield higher engagement and conversions.
- Opportunities: mobile UX optimization, English-language content, leveraging blogs and calendars for SEO/social campaigns, converting ticket-seekers to full-package buyers.

Audience insights

- Core users: mid-age adults (25–54), primarily in France; female users show higher conversion intensity, males slightly higher engagement.
- Desktop users drive key actions; mobile generates most traffic but lower conversions. Key segments: action-oriented buyers, content-driven planners, and mobile browsers.

Strategic implications

- Growth opportunities: mobile optimization, content expansion, social campaigns, upselling optional services.
- Threats: DIY resellers, luxury competitors, and seasonal event dependency.

2. Service Offering Analysis

2.1 Overview of the Offering

Description of the Service Offering

MYCOMM's B2C activity consists of **selling sports-event travel experiences** via its website. Instead of customers planning everything separately, MYCOMM offers organized, ready-to-book trips to major sporting events.

These trips are sold as **all-inclusive packages**, which typically include:

- Event ticket
- Accommodation
- Transport (or travel solutions depending on the package)
- Optional add-ons (depending on the offer)

Product Categories

Category	Events	Offer	Price
Rugby			
	Six Nations in Paris 1. France vs England 2. France vs Ireland	Event Ticket + Hotel	from 550€ from 350€
	Champions & Challenge Cup Finals in Bilbao	Event Ticket + Hotel Dining (Optional)	from 990€
Football			
	Customized offers available on request	Event Ticket + Hotel Flight (Optional)	on request
Formula One			
	2026 F1 Monza Grand Prix	Event Ticket + Hotel Flight (Optional)	from 890€
	2026 F1 Barcelona Grand Prix		from 1050€
	2026 F1 Madrid Grand Prix		from 920€
	2026 F1 Monaco Grand Prix		from 1250€
Tour De France			
	Available 21 Events **(for each stage separately)**	VIP Event Ticket	from 390€

Pricing Model and Positioning

MYCOMM positions itself as an **experienced sports-travel agency** offering **all-inclusive event packages**. The company highlights its credibility through its presence on the market since 2019, **around 33,000 clients per year**, **7 agencies**, and **70 travel experts**.

The company uses a **package-based pricing model**, where the total price depends on:

- the sporting event
- accommodation level
- duration of the trip
- optional transport
- optional dining or hospitality services

The offer reflects a **mid-market positioning**, focused on **convenience, guaranteed event access, and curated travel experiences**, rather than low-cost travel.

This positioning targets customers who value:

- reliability
- comfort
- guaranteed access to events
- simplified trip organization

Core Value Proposition

MYCOMM helps sports fans and event travelers attend major sporting events without the complexity of organizing the trip themselves by offering all-inclusive travel packages, allowing customers to focus on enjoying memorable live sports experiences.

Component	**MYCOMM example**
Target Customer	Sports fans and event travelers
Problem Solved	Complex event-trip organization
Main Benefit	All-inclusive sports travel packages

2.2 Value Drivers and Differentiators

Functional benefits

The MYCOMM offering provides several practical advantages for customers versus a “DIY approach” of self-organizing such travel.

Functional Benefit	**Customer Value**
Ticket + travel packages	Simplifies trip planning
Official event access	Reduces risk when buying tickets

Online booking process	Easy purchase experience
Pre-organized logistics	Saves time and effort
Structured travel packages	Reduces uncertainty

These benefits address one of the main barriers to attending international sporting events: **organizational complexity**.

Emotional / experiential benefits

Beyond functional value, MYCOMM's offering is strongly driven by **experience and passion for sports**.

Emotional Benefit	**Customer Impact**
Attending live sporting events	Creates memorable experiences
Passion for sports teams/events	Strengthens emotional engagement
Shared travel experiences	Social and group value
"Once-in-a-lifetime" trips	Perceived uniqueness of the offer

This emotional dimension is central to MYCOMM's marketing potential, especially for **social media campaigns (SMA)**.

Proof points supporting the offering

The website highlights several credibility elements that reinforce the company's value proposition.

Proof point	**Proof**	**Purpose**
Years of experience in sports travel	since 2019	Build trust
Number of travelers served	around 33,000 clients per year, 28,000 (2024)	Demonstrates reliability
Customer testimonials	Trustpilot	Social proof
Prestigious approvals and partners	Tour de France, Circuit de Barcelona	Brand credibility

These elements help reduce perceived risk when purchasing relatively high-value travel packages online.

3. Competitive Analysis

3. 1 Market overview

MYCOMM operates in the sport tourism industry, a market projected to reach over 700 billion USD in 2025[1]. It is one of the fastest-growing segments of tourism. European actors hold the largest share, with nearly 40% of market share in 2025, according to Fortune Business Insights.

The market is quite heterogeneous and includes travel agencies, sport organizations, and event organizers.

We can find offerings that target two main groups: **spectators** and **participants**. Participant-focused packages cater to event participants (e.g. a Boston Marathon package, as offered by Sport Tours International). The present analysis will focus on **spectator-oriented products (**as sold by MYCOMM).

Our research indicates that stakeholders can be grouped into three categories:

- **1) Specialized sport travel agencies** (e.g., MYCOMM) that organize and sell all-inclusive sport trips.
- **2) Travel operators tied to a given sport or event** (e.g., F1 Experiences, Voyages FFF) that focus on or partner with a federation or an event organizer.
- **3) Large tour operators also offering sport packages** (e.g., TUI, Cassidy Travel).

Sport offerings are linked to infrastructure, fan base, and revenue potential, therefore the main offerings usually concern football (soccer), tennis, cycling, Formula 1, rugby, and basketball. We see that two specialization models exist:

- **Single-sport experts** (usually our group 2) with official partnerships or deep connections to federations or events.
- **Multi-sport experience providers** offering travel bundles across several sports.

Geographic models can also differ:

- **Local operators** serve one origin market (e.g., Rugby Travel Ireland).
- **Regional European operators** (e.g., MYCOMM) cover multiple countries.
- **Global operators** operate across continents.

MYCOMM's **direct competitors** sell similar products to similar customers, meaning:

- All-inclusive experiences
- Major events (Tour de France, Six Nations/European Rugby Champions Cup, F1 European Grands Prix, FIFA/National football leagues, ATP circuit)
- European destinations

[1] Report "Taille, part et analyse de l'industrie du tourisme sportif, par type de sport (tennis, cricket, football/soccer et autres), par type de tourisme sportif (tourisme sportif actif, tourisme sportif passif et tourisme sportif nostalgique), par type de touriste (national et international) et prévisions régionales, 2026-2034" Source: Fortune Business Insights [online] https://www.fortunebusinessinsights.com/fr/sports-tourism-market-110568

- Mid-market pricing (not “VIP” or “Luxurious” experiences)

MYCOMM’s indirect competitors satisfy the same need but with **different offerings**. That is, they provide access to EU sporting events without bundling packages, allowing for a DIY approach. This includes ticket-only resellers, fan clubs, media platforms selling hospitality experiences, or classic travel companies.

In the next section, we present the competitive landscape from MYCOMM

3.2 Competitive Landscape

This section maps MYCOMM’s main competitors based on organic search, SEMrush, and SimilarWeb data. We highlighted actors targeting similar audiences with similar sport travel offerings across Europe.

Example of direct competitors

Note that the list below is not exhaustive. Competitors will vary depending on the audience profiles (French-speaking vs. non-French-speaking) and the desired offering. The competitive perspective is highly event/product-dependent. For example, *MYCOMMS* might only compete against a vendor like *England Rugby Travel* on its Six Nations tournament package and with *Mummu Cycling* on TDF-related offerings.

Name	Description	Competing sport/event
Groupe Couleur	France-based **sport travel and hospitality agency** offering all-inclusive fan packages with strong expertise in cycling and rugby events.	Tour de France, Cycling Classics, Six Nations, Rugby Champions Cup
Hémisphères Voyages	French **tour operator** offering bespoke and packaged sport event trips for Francophone travelers.	Rugby internationals, Football leagues, Formula 1
F1 Experiences	**Formula 1**’s **official hospitality and travel provider** delivering premium Grand Prix packages.	Formula 1 European Grands Prix (Monaco, Monza, Spa, Barcelona, etc.)
Global Tickets	**Motorsport** and major **event ticket reseller** packaging tickets with hotels and travel services.	Formula 1, MotoGP, Motorsport events
Gullivers Sports Travel	**Multi-sport supporter travel** specialist providing bundled trips with tickets and hospitality.	Rugby (Six Nations, tours), Cricket, Formula 1, Football
SportsBreaks.com	Fan-focused **short-break packages** combining match tickets and hotels at mid-market pricing.	Football leagues, Six Nations, NFL Europe
Grand Tours Project	Europe-focused **cycling travel operator** offering curated tours for iconic races, including spectator and immersive experiences.	Tour de France

Mummu Cycling	Official **Tour de France tour operator** providing structured travel and hospitality packages, including VIP access and convoy experiences.	Tour de France
England Rugby Travel	**Official travel agency** of England Rugby, offering bundled travel and hospitality packages for **Six Nations** fixtures with tickets, accommodation, and local experiences.	Six Nations 2026, France v England
Cassidy Travel	**Sport travel provider** bundling Six Nations tickets with accommodation and optional flights for mid-market rugby fans.	Six Nations

Example of indirect competitors

SEMrush organic analysis indicates that, in terms of organic visibility, visible SERP competitors to MYCOMM are often ticket resellers rather than only full-service travel agencies (cf Figure 1 below). This shows that indirect competition has a significant impact and cannot be ignored. At the same time, this presents a strategic opportunity: users initially searching for tickets or DIY solutions may be converted into buyers of bundled travel packages if presented with a compelling all-inclusive offer.

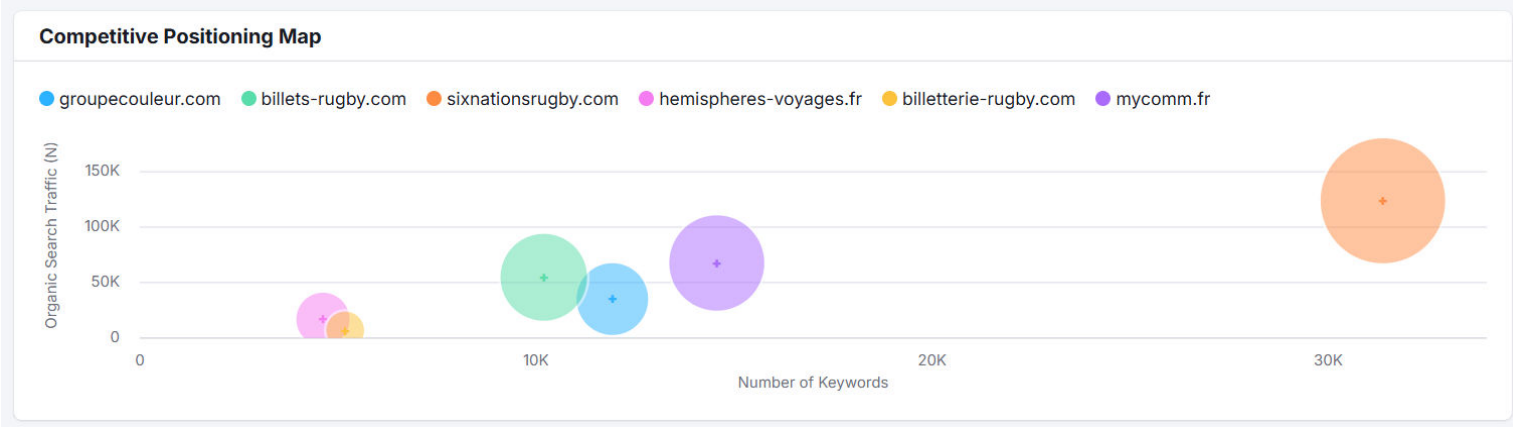

Figure1: SEMRush organic competitive map on MYCOMM's French domain shows its visibility against top ranking competitors.

Billets Rugby	Ticket-led reseller bundling rugby match access	Six Nations, Top 14, European Rugby Champions Cup
Billetterie Rugby	Rugby ticketing agency providing match access	Six Nations, Top 14, European Rugby competitions
Monaco Grand Prix Tickets	Event-specialist agency focused on Monaco GP travel packages	Formula 1 – Monaco Grand Prix
P1 TravelGrand Prix de Monaco	Netherlands-based official ticket reseller packaging sport event access with additional services (diner, lounge access etc).	Football leagues, UEFA tournaments, Formula 1, Tennis

3.3 Competitive Advantages and Gaps

To analyze the competitive positioning, we can use a custom **evaluation framework** focused on directly comparable aspects of one offer (i.e. event-based package comparison). We can look at aspects that should impact the customer choice: package composition, customization, pricing, official partnerships, and customer experience.

To simplify our analysis, we will focus on a select group of competitors representing different approaches within the sport travel market:

- From the **event- or sport-focused agency** segment, we will examine *F1 Experiences*.
- For the **global travel operator** segment, we will include *Cassidy Travel*.
- Finally, for the **specialized multi-sport agencies**, we will profile *Hémisphères Voyages* and *Groupe Couleur*.

We'll also focus on analyzing a single package offering (F1 Barcelona GP). This selection allows us to capture the diversity of business models and offerings while keeping the analysis focused and actionable.

Dimension	MYCOMM	F1 Experiences	Cassidy Travel	Hémisphères Voyages	Groupe Couleur
Package composition	3-day ticket + 2 nights Barcelona city center + breakfast + transfers (Sat/Sun only) + on-site team support. Clean essentials package.	Tiered offerings from basic stand to full VIP with pit lane walks, paddock tours, driver meet & greets, team garage access and premium dining	3-day ticket (with grandstand upgrades) + 3-4 nights accommodation + optional Ireland flights + breakfast. Flexible duration but no transfers.	3-day general admission ticket + 2 nights hotel + breakfast + digital documents + remote assistance. Simple base with tribune upgrade options.	3-day pass + 2 nights (Costa Brava or Barcelona choice) + breakfast + souvenir gift. Location flexibility with self-guided transfer
Customization	Moderate: seating categories, hotel tiers, transport options.	Extensive: 7 package tiers including team-specific options, grid walks, garage tours, and full hospitality spectrum.	Moderate: grandstand tiers, duration options, multi-city flight add-ons.	Moderate: seating categories, hotel tiers, plus optional extensions, meals, and visits	Moderate: seating categories, hotel tiers.
Pricing and ease of purchase	€1,050 starting price with transparent online booking system. Clear pricing structure, straightforward purchase flow.	Pricing not displayed - requires inquiry through multi-step process with 10+ country phone support. Premium positioning but least transparent.	€2,598 starting (includes flights). Straightforward purchase flow.	€595 starting (lowest entry). Clear online builder. transparent tier pricing and straightforward purchase flow.	€589 starting (lowest overall). Instant cart system with 5% group discount (8+ people). transparent pricing.

Partnerships (can impact brand credibility)		Only provider with direct F1 authorization.			
Customer Experience & Service (incl. linguistic support for non-FR audiences)	English website available, phone support, on-site team presence, digital pre-trip documents. Professional multilingual support.	Global infrastructure with phone numbers for 10 markets (AU, DE, ES, FR, UK, IT, MC, PL, US). Premium white-glove service expectation.	phone hotline, detailed FAQ section.Limited for non-English speakers.	French only, phone support, personal travel expert (Ophélie), traveler app. Language-limited internationally	French only. phone support. Language-limited internationally

Overall, based on the above offering analysis example, we can say that MYCOMM is well-positioned in the European sport tourism market due to several competitive advantages.

→ Compared with French-only travel agencies, MYCOMM can serve **international audiences**, expanding its market reach beyond local demand.
→ Against DIY ticket or package solutions, MYCOMM offers relatively-well **customizable, all-inclusive packages**, converting users seeking tickets into full travel experiences.
→ Compared with large international providers, MYCOMM combines **local expertise and credibility**: for French-related events like the Tour de France, it provides authentic on-the-ground knowledge, while for international events such as F1, it benefits from the **trust of a French-speaking audience**.
→ Its **mid-market pricing** positions MYCOMM attractively between luxury experiences and budget travel, offering strong perceived value.

Additional strengths include **personalized customer service**, including linguistic support for non-French audiences, and a **streamlined digital booking experience** that makes purchases simple and transparent. MYCOMM also holds official authorizations for key events (e.g., F1), reinforcing credibility and brand trust.

We can note that the offering may **not satisfy customers seeking highly personalized or luxury experiences**, where competitors like F1 Experiences or premium international agencies have an edge. MYCOMM's credibility and trust are strongest with French-speaking audiences, which may **limit appeal for non-French-speaking travelers**. Additionally, while packages are modular, some users seeking **extreme flexibility** in experience may find the options restrictive. Finally, as a mid-market provider, MYCOMM may face **pressure from DIY alternatives and ticket-only resellers**, particularly when customers prioritize cost over an all-inclusive buying experience.

4. Website Analysis

4.1 Website Structure and Architecture

Main Navigation and Hierarchy

The MYCOMM website follows a **catalog-oriented structure**, allowing users to browse sports-event travel packages by 4 categories: Rugby, Football, Formula One, Tour de France. The hierarchy generally follows this structure:

Home → Event category → Event page → Package details → Booking

This structure supports a product-discovery journey, enabling users to move from general interest (sports events) to specific travel packages.

Key Sections and Page Types

The website includes several core page types:

Page Type	Purpose
Homepage	Introduces the brand, featured events, testimonials and partners
Event category pages	Organize offers by sport or competition
Product/package pages	Present travel packages and booking details
About Us page	Provides company background and credibility information
Contact pages	Allow customer inquiries
Log-in page	Allows customers to access their personal account
My Cart page	Displays selected packages before purchase

4.2 Content Analysis

Note: The English version of the website is analysed for this analysis.

Types of Content

The MYCOMM website primarily features **commercial and experience-oriented content** designed to support travel package purchases.

Existing content includes:

Type	Example

Event descriptions	Tour de France: https://www.mycomm.fr/en/category/tour-de-france
Travel package pages	Champions Cup Final: https://www.mycomm.fr/en/product/ticket-champions-cup-final
Videos from events with MYCOMM	Rugby: https://youtu.be/Fy9jdemYRsI
Customer testimonials	Trustpilot: https://www.trustpilot.com/review/mycomm.fr?utm_medium=trustbox&utm_source=Carousel

Content Depth and Quality

Product pages provide essential information such as:

- event descriptions
- package inclusions
- pricing information

However, the **content structure is not fully consistent** across events. Some trips offer ready-to-book packages, while others rely on request forms, and the services included vary between trips. This can make the offer harder to understand for users without prior knowledge.

Although the website provides the necessary information and contact options, the content remains primarily transactional, with **limited content for users in the early stages of the buying journey.**

Additionally, **some text elements appear misaligned on certain pages**, which may reduce the overall sense of professionalism.

Alignment with User Intent and Awareness Stages

The MYCOMM website mainly supports users who already know they want to attend a sporting event. To better understand content opportunities, the customer journey can be analyzed using the **five awareness stages**.

Awareness stage	**What the customer may ask**	**Content MYCOMM could create**	**Current availability on website**
Unaware	“What unique travel experiences can I do this year?”	Event calendars, inspiration content, sports travel ideas, destination stories	Not present
Problem-aware	“I want to attend a major sporting event but don’t know how to organize the trip.”	Guides explaining sports travel packages, how event trips work	Very limited
Solution-aware	“Are there agencies that organize sports-event trips?”	Service explanation pages, comparison content, FAQs	Partially present

Product-aware	“What trips does MYCOMM offer?”	Event pages, package descriptions, testimonials, videos	Present
Most aware	“I want to book this trip.”	Booking pages, pricing details, CTAs	Strongly present

The MYCOMM (English version) website is primarily optimized for **product-aware and most-aware users**, who already know which events they want to attend.

There is **limited content for earlier awareness stages**, where potential customers are still exploring sports travel experiences or learning how event travel packages work. Developing content for these stages could help MYCOMM attract new audiences through SEO and social media while guiding users progressively toward booking.

4.3 Calls to Action (CTAs)

The MYCOMM website provides several clear and visible calls to action (CTAs), mainly focused on contacting the company or booking travel packages. These include:

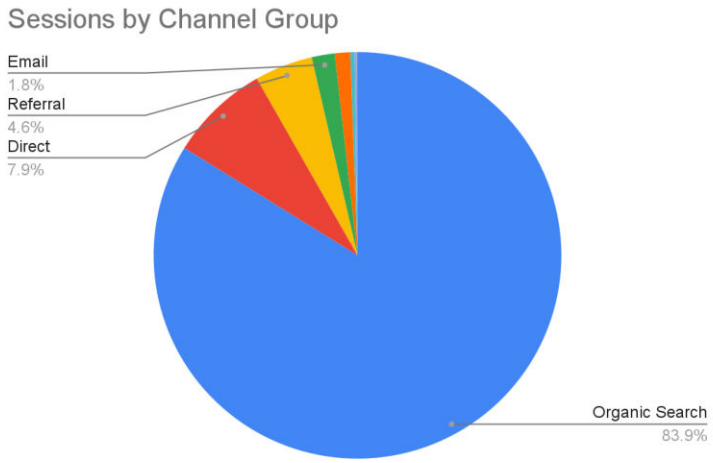
- a dedicated Contact page
- a visible phone number on the homepage
- “Book now” and “Discover now” buttons displayed in a contrasting red color
- event-specific request forms (e.g., Tour de France and football)

The website also offers an agent-assisted offer request option, which supports customers who need personalized travel arrangements.

Overall, CTAs on the website are highly visible, accessible, and aligned with the company’s business goals, making it easy for users to get in touch or move toward booking.

4.4 Traffic and Usage Data

Note: This analysis is based on the English version of the MYCOMM website, while the provided dataset reflects overall website activity across versions. The English website currently does not include blog content, which creates an inconsistency between the website content review and the traffic data.



Traffic Sources

The traffic distribution shows a **very strong dependence on Organic Search**, which is the main acquisition channel for the MYCOMM website.

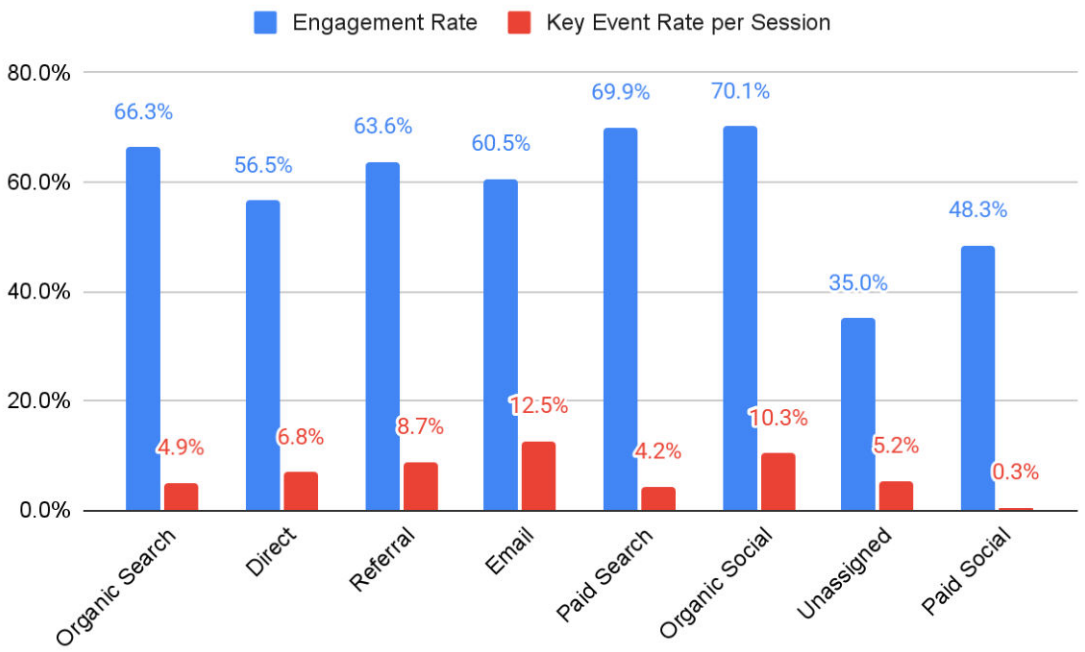
Traffic distribution:

- Organic Search: **83.9%**
- Direct: **7.9%**
- Referral: **4.6%**
- Email: **1.8%**

- Paid Search: **1.2%**
- Organic Social: **0.3%**
- Paid Social: **0.1%**

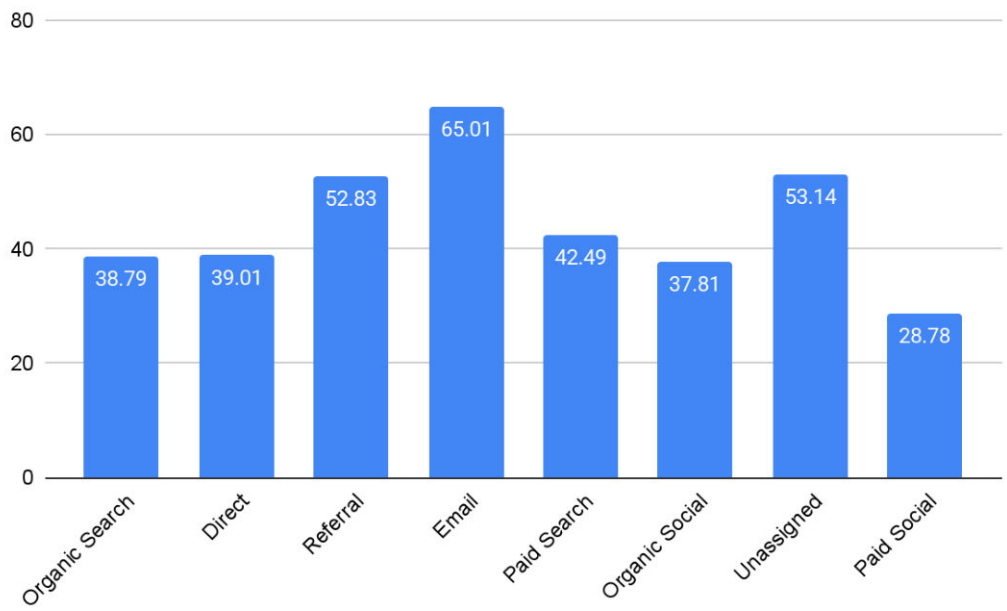
This indicates that **SEO is currently the primary traffic driver** for MYCOMM.

Channel Performance Comparison



Channel	% Traffic	Engagement	Key Event Rate	Interpretation
Organic Search	83,9%	Strong 66.3%	Moderate 4.9%	Main traffic driver; strong interest but mixed intent.
Email	1,8%	Good 60.5%	Highest 12.5%	Highest conversion potential.
Referral	4,6%	Good 63.6%	Strong 8.7%	High-quality traffic.
Organic Social	0,3%	Highest 70.1%	Strong 10.3%	High-quality traffic.
Paid Search	1,2%	Strong 69.9%	Moderate 4.2%	Well-targeted traffic but conversion can be improved.
Paid Social	0,1%	Low 48.3%	Low 0.3%	Weakest-performing channel.

Engagement Time by Channel



The average engagement time confirms the traffic-quality differences observed above.

- **Email and Referral** traffic show the longest engagement times, indicating more involved users.
- **Organic Search** shows moderate engagement time, consistent with its role as the main acquisition channel.
- **Paid Social** shows the lowest engagement time, reinforcing its weaker performance.

Summary: Organic Search is the main traffic driver, contributing the largest number of engaged sessions and key events overall. At the same time, channels such as Email, Referral, and Organic Social show higher engagement and conversion rates, indicating stronger user intent per session. In contrast, Paid Social currently underperforms compared to other acquisition channels.

Opportunity: Given the dominant share of Organic Search traffic, a deeper analysis of this channel would be particularly valuable. Combining traffic-source data with additional dimensions such as location, gender, device type, and user behavior could help identify which audiences and contexts generate the most key events.

Additionally, separating key events that represent actual conversions from other interaction events would provide a clearer understanding of performance and business impact.

Data Limitations: While these data points exist in the provided materials, they are not connected across datasets, which limits the ability to conduct deeper cross-analysis and draw more precise conclusions about user behavior.

Most Visited Pages

Page Name	SUM of Views	AVERAGE of Events per active user	AVERAGE of Average engagement time pe	SUM of Number of events

Access Table: here.

- **Product pages and blog pages** generate the majority of website traffic, each exceeding 260k views.
- **Blog pages** show slightly higher engagement time (40.2s) than product pages (31.7s), suggesting users spend somewhat more time on informational content.
- **Category pages** have the lowest engagement time (16.8s), confirming their role as navigation pages.
- **The cart** page shows the highest engagement time (110.7s) and events per user, reflecting interaction during the booking process.
- **Contact and login pages** also show relatively high engagement time, indicating users spend time completing actions or seeking support.

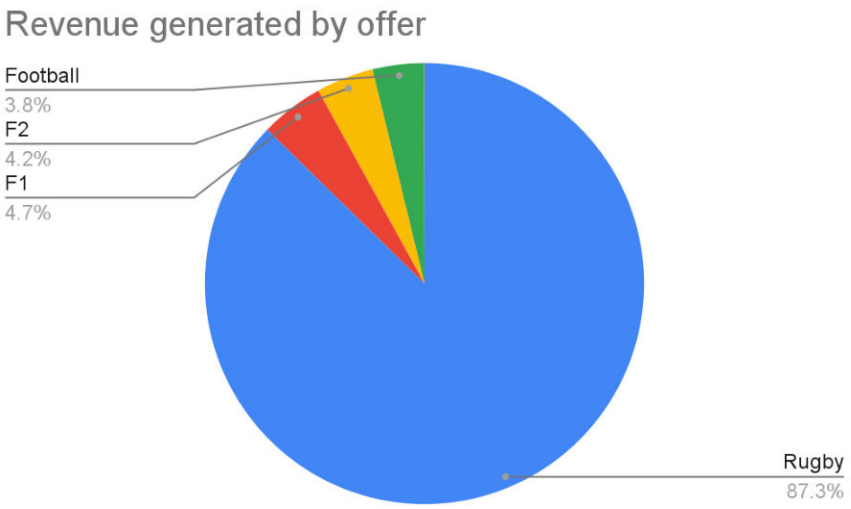
Gift Card	€109.7	1
Grand Total	**€287,008.2**	**202**

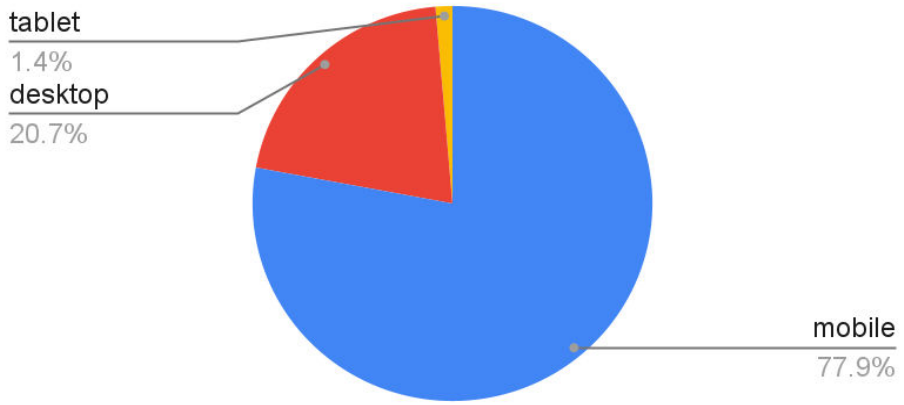


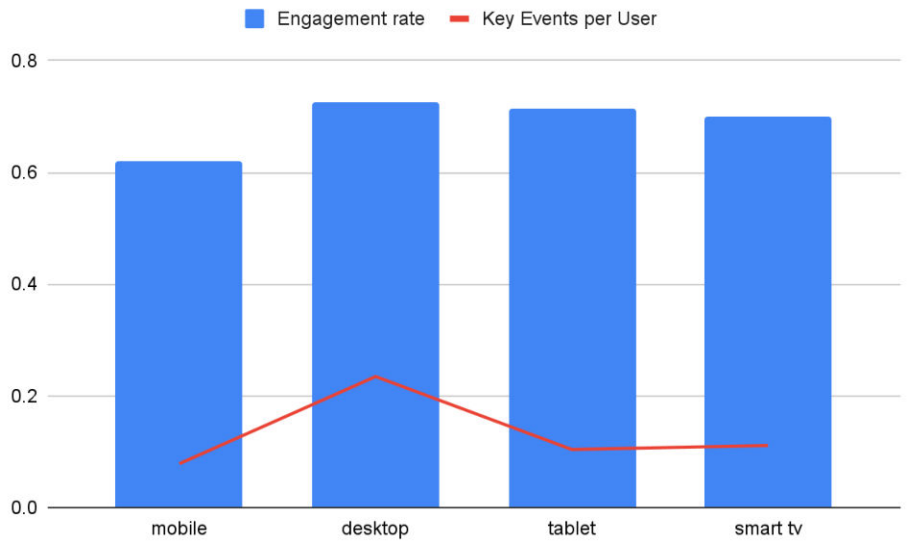
Analysis of the purchased amounts and generated revenue shows that **Rugby dominates sales performance**, accounting for **€250,554 (87.3% of total revenue) and 180 out of 202 purchases**. Revenue generation is therefore heavily concentrated in a single offer category.

In contrast, **F1, F2, and Football together account for only about 12.7% of total revenue**, indicating a relatively small contribution compared to Rugby despite higher average revenue per purchase in some categories.

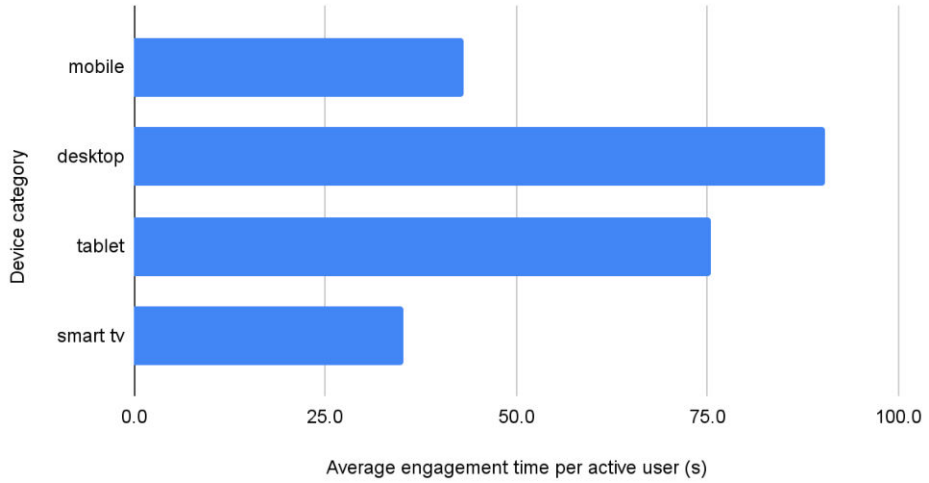
*Note: It is also important to note that **the absence of "Tour de France" data** reflects missing or unavailable data rather than zero purchases.*

Devices Used (desktop, mobile, tablet)





Engagement Time per Device category



Mobile accounts for the majority of users (≈78%), making it the main traffic source. However, mobile shows the lowest engagement indicators, with 61.9% engagement rate, 43 seconds average engagement time, and 7.86% key events per user.

Desktop traffic represents only about 21% of users, but performs significantly better across all engagement metrics. Desktop users spend more than twice as much time on the website (90.5 seconds) and generate three times more key events per user (23.46%) than mobile users.

Tablet traffic is small but shows engagement levels close to desktop, while Smart TV usage is negligible.

Insight: There is a clear gap between traffic volume and interaction quality. Mobile drives visits, while desktop drives meaningful engagement and key actions.

4.5 Website Performance Assessment

Strengths of the Current Website

- Clear catalog-style structure that allows users to browse travel packages by sport and event.
- Product and event pages contain essential decision-making information.
- Strong SEO traffic acquisition, with Organic Search driving the majority of visits.
- High visibility and accessibility of CTAs, including booking buttons, contact options, and inquiry forms.
- Desktop users show strong engagement and key-event performance, indicating effective support for decision-stage users.
- Blog content (French version) contributes significantly to traffic acquisition, especially calendar-based articles.

Key Friction Points and Gaps

- Limited visibility on purchase behavior, as the dataset does not allow purchases or conversions to be clearly attributed to specific traffic sources or user journeys. This makes it difficult to understand which channels and paths most effectively lead to bookings.
- Lack of early-stage content in the English version of the website.
- Paid Social currently underperforms in both engagement and key events.
- Mobile users generate most traffic but lower engagement, suggesting possible UX or conversion optimization opportunities.

5. Target Audience Analysis

Demographic Overview: Age

Users aged 25–34, 45–54, and 35–44 demonstrate the highest engagement rates, all above 0.72. Among these groups, **25–34** users show the strongest overall performance, combining the highest engagement rate (0.7458) with a high key event rate per user (0.0571). This indicates that mid-age adult cohorts represent the most engaged and behaviorally valuable audience segments.

Age	Engagement Rate	Key Event Rate per User
25-34	0.7458	0.0571
45-54	0.7381	0.0572
35-44	0.7259	0.0551

Demographic Overview: Country

France contributes by far the largest user base (284,397 active users) while maintaining strong engagement (0.64) and the highest key event rate per user (0.061), making it the most commercially and behaviorally valuable market.

Among smaller markets, **Switzerland** and **Belgium** show the highest engagement rates (0.67 and 0.65 respectively), indicating high-quality traffic despite lower volumes. The **United States** and **Canada** contribute fewer users and show comparatively lower engagement and conversion intensity.

Country	Active Users	Engagement Rate	Key Event Rate per User
France	284397	0.64394998	0.06099220456
Belgium	5933	0.6533891439	0.04415978426
Canada	4767	0.5540478026	0.02412418712
Switzerland	3907	0.6677838291	0.05477348349
United States	2160	0.4881043745	0.02592592593

Demographic Overview: Gender

Both **male** and **female** users demonstrate significantly higher engagement than users with unknown gender. While males show the highest engagement rate (0.718), females exhibit the strongest key event rate per user (0.070), indicating higher action completion intensity. This suggests that although both genders are highly engaged, female users may represent a more conversion-oriented segment.

Gender	*Active Users*	*Engagement Rate*	*Key Event Rate per User*
unknown	227443	0.6086761799	0.0577859068
male	64954	0.7184199137	0.05874926871

female	34967	0.7123864969	0.07032344782

Device Behavior

Desktop users demonstrate the strongest engagement across all metrics, with the highest engagement rate (72.7%), longest average engagement time per user (90.5 seconds), and the highest key event rate per user (23.46%). **Tablet users** also show strong engagement levels, while **mobile users**, despite representing large traffic volume, exhibit significantly lower engagement depth and conversion intensity. **Smart TV traffic** is negligible and not behaviorally meaningful.

Device category	Engagement rate	Average engagement time per active user (s)	Key Events per User
mobile	61.9%	43.0	7.86%
desktop	72.7%	90.5	23.46%
tablet	71.4%	75.5	10.40%
smart tv	0.7	35.3	11.11%

Traffic Acquisition

Organic Search drives the largest volume of sessions (364,096) and maintains perfect engagement (100%), making it the primary traffic driver. However, **Email** and **Referral** channels outperform others in engagement depth and conversion intensity, with the highest average engagement time per session (65.01 seconds) and key event rate per session (12.5%) for Email. This suggests that while Organic Search fuels scale, owned and referral channels deliver higher-quality engagement.

Default Channel Group	Sessions	Engagement Rate	Average Engagement Time per Session	Key Event Rate / Session
Organic Search	364096	100.0%	38.79	4.9%
Direct	34396	88.9%	39.01	6.8%
Referral	19997	70.1%	52.83	8.7%
Email	7942	69.9%	65.01	12.5%
Paid Search	5298	66.7%	42.49	4.2%

Page Behavior

Product pages related to major sporting events - particularly **6-nations** and **champions-cup** - generate the highest engagement depth, with engagement times exceeding 47 seconds and strong events per user values (4.5–5.7). Several **blog** content pages (e.g., tournament calendars and stadium guides) also demonstrate high interaction rates, indicating strong informational intent and sustained content engagement. This pattern suggests that both transactional product pages and long-form editorial content serve as key engagement drivers across the site.

Page path and screen class	Views	Average engagement time per active user	Events per active user	Page Name
/produit/ecosse-france-tournoi-des-6-nations	44485	47.04756476	4.5	/produit/
/blog/calendrier-tournee-automne-2024	43893	27.47587907	5.6	/blog/
/blog/calendrier-tournoi-des-6-nations-2026	39668	29.60159404	4.5	/blog/
/	39543	21.51759004	5.3	/
/blog/nouveau-camp-nou-barcelone	30904	39.330175	5.9	/blog/
/blog/stades-coupe-du-monde-2026	26659	48.2880432	5.0	/blog/
/produit/irlande-france-tournoi-des-6-nations-2025	25914	34.26090039	5.0	/produit/
/produit/finale-champions-cup-2025-ubb	25553	58.21539249	5.7	/produit/
/categorie/voyage-rugby/tournoi-des-6-nations	19951	34.7705951	4.1	/categorie/

/categorie/voyage-rugby/top-14	17686	21.24430764	4.3	/categorie/

User Actions (Events)

The most frequent user actions are **page_view**, **session_start**, and **first_visit**, indicating strong traffic volume and onboarding activity. However, deeper engagement signals come from **video_progress** (4.35 events per active user) and **time_spent_over_4min**, suggesting that a subset of users engages intensively with long-form or rich media content. This indicates that high-value engagement is driven not only by browsing but by sustained content interaction.

Event name	Number of events	Events per active user
page_view	764134	2.363530074
session_start	427916	1.323661695
first_visit	327048	1.015178887
user_engagement	280207	1.321887015
scroll	116068	1.174278141
time_spent_over_4min	50746	1.089741663
video_progress	45736	4.348355201

Search Behavior (Google Search Console)

Branded and high-intent informational queries dominate search performance. The query “mycomm” shows exceptionally strong engagement with a 57.0% CTR and top position (2.09), indicating strong brand demand. Event-based queries such as “scotland france 2026,” “six nations tournament 2026 schedule,” and “f1 calendar 2026” also generate high click-through rates, reflecting strong user intent around future sports events and planning content.

Most frequent queries	Clicks	CTR	Position
mycomm	12313	57.04%	2.09
scotland france 2026	6019	28.53%	1.7
new camp nou	5948	17.80%	2.66
six nations tournament 2026 schedule	5591	27.15%	2.65
six nations tournament 2026	4602	16.64%	3.91
f1 calendar 2026	4450	17.81%	1.87
camp nou works	4256	10.89%	3.87
top 14 semi-final 2025	4042	4.58%	4.52
f1 calendar 2025	3640	2.78%	7.75
6 nations 2026	3487	15.85%	4.29

Blog pages such as “calendrier-tournoi-des-6-nations-2026” and “calendrier-tournee-automne-2024” generate the highest search-driven traffic and engagement. These pages lead in clicks, reflecting strong interest in upcoming sports events and tournament schedules. Additionally, product pages like “ecosse-france-tournoi-des-6-nations” and “irlande-france-tournoi-des-6-nations-2025” also perform strongly, indicating that users move seamlessly from informational content to transactional opportunities.

Most popular pages	Clicks	CTR	Position

Product Interest (E-commerce)

The most viewed and interacted-with products are primarily event-based packages for major sports tournaments. The “Ireland vs France – Six Nations 2025 – Organized Trip” leads in

views (16,812) and conversions (29 purchased), followed by “[Sold Out] Scotland vs France – Six Nations 2025” and “France vs England – Six Nations 2025 in Lyon (ticket + hotel)”. These results indicate that high-value event packages attract the most attention and engagement, highlighting the importance of premium sports trips for the audience. Secondary interest exists in F1 and other rugby events, although conversion rates are lower for these products

Item name	Items viewed	Items added to cart	Items purchased
Ireland vs France – Six Nations 2025 – Organized Trip	16812	301	29
[Sold Out] Scotland vs France – Six Nations 2025	12973	0	0
France vs England – Six Nations 2025 in Lyon (ticket + hotel)	11060	17	5
Scotland vs France – Six Nations 2025	10660	11	0
Monaco F1 Grand Prix 2025 – Ticket & Organized Trip	9429	0	0
Wales vs France – Six Nations 2025 – Organized Trip	9163	67	25
Spain F1 Grand Prix 2025 in Barcelona – Ticket & Organized Trip	8533	42	5
France vs Ireland – Six Nations 2025 in Marseille	5625	35	18
Rome Tournament 2025 – Ticket & Hotel Package	5620	0	0
TOP 14 Semi-Finals 2025 VIP Package	5323	54	3

Audience Segments (Synthesis)

Based on engagement metrics and user actions, the following audience segments emerge:

- **Information Seekers:** Users who spend significant time on blog pages and tournament calendars without purchasing.
- **Action-Oriented Users:** Users with high key event rates and multiple interactions per session, frequently adding items to the cart or viewing products.
- **Returning/Engaged Users:** Users with repeated sessions, strong engagement time, and higher likelihood to complete transactions.
- **Mobile Browsers:** Users primarily accessing content via mobile devices, showing moderate engagement and lower conversion depth.

These segments highlight distinct behavioral motivations and allow prioritization for content, marketing, and product strategies.

5.2 Behavioral and Demographic Insights

Behavioral Insights

What we note in terms of behavioral patterns:

- Desktop users exhibit the highest engagement rates and key event rates, indicating intensive interaction on larger screens.
- Mobile users generate significant traffic but lower engagement and conversion depth.
- Users interact heavily with blog content and event calendars, suggesting strong informational intent drives the majority of engagement.
- Event-specific products (Six Nations, F1) attract both attention and conversions among engaged users.
- High-value actions, such as video progress and long session times, indicate that sustained content interaction is a key driver of engagement.

Demographic Insights

What we note in terms of demographic patterns:

- **Age:** Mid-age cohorts (25–34, 45–54, 35–44) show the highest engagement rates and key event rates per user.
- **Country:** France dominates in both volume and engagement, with Switzerland and Belgium showing high engagement despite smaller audience sizes.
- **Gender:** Female users demonstrate higher action intensity (key event rate), while male users show slightly higher overall engagement rate. Unknown gender accounts for a large portion of users but is less actionable for analysis.

Needs, Motivations, and Pain Points

These insights highlight priorities for improving engagement and conversion: **optimize mobile experience, simplify booking flows, and maintain high-quality, event-focused content.**

Audience Segment	Needs	Motivations	Pain Points
Information Seekers	Clear, structured tournament and event content	Stay informed, plan attendance	Difficult navigation or missing details
Action-Oriented Users	Easy booking and purchase flows	Complete transactions efficiently	Cart abandonment, limited availability
Returning/Engaged Users	Personalized recommendations and updates	Access to relevant events quickly	Lack of reminders or updates for upcoming events
Mobile Browsers	Mobile-optimized content and quick access	Browse on the go	Lower engagement due to small screen / less interactive layout

6. Persona Creation

Note: While MYCOMM's core audience remains French-speaking sport fans, we want here to actively focus on developing engagement with international, non-French audiences.

Our personas therefore reflect this dual focus: they capture behaviors and preferences of both the existing French market (primary) and potential international users (growth target).

Persona 1: Rugby-Alain, the mid-age sports planner

- Age: 45-55
- Gender: Male
- Location: France
- Role: Professionals with disposable income
- Profile: Rugby fan, seeking curated travel experiences for major sporting events

Goals and Success Criteria:

- Attend major sporting events without organizational hassle
- Maximize comfort, reliability, and event access
- Have a memorable, social experience with friends or family

Pain Points and Barriers:

- Complexity of booking international travel and event tickets separately
- Lack of official access or guarantee for popular events
- Difficulty navigating mobile interfaces for complex bookings

Decision Drivers:

- All-inclusive packages with official event tickets
- Group discount for friends
- Proven reliability and experience of the agency (Trustpilot reviews, years in market)
- Mid-to-premium price positioning that balances cost with quality

Preferred Channels and Touchpoints:

- Desktop website for detailed research and booking
- Email for reminders and targeted offers
- Blog and calendar content for event planning inspiration

Persona 2: F1-lovers Tom & Natalia

- Age: 25–34
- Gender: Male & Female
- Location: Belgium (English-speaking, might understand french)
- Role: Early-career professionals (consultant/digital profession)
- Profile: Sports enthusiasts, digitally savvy

Goals and Success Criteria:

- Attend high-profile events like F1
- Share experiences on social media
- Discover new destinations and unique experiences

Pain Points and Barriers:

- Budget-conscious; sensitive to pricing vs. perceived value
- Limited time for trip research

Decision Drivers:

- Seamless online booking experience
- Visual and social proof content (videos, testimonials)
- Optional add-ons (transport, hospitality) that add convenience and personalization

Preferred Channels and Touchpoints:

- Mobile browsing for quick discovery
- Social media for inspiration (Instagram, YouTube, TikTok)
- Organic search for event-specific information and calendars

Persona 3: Yann, the Information-Seeker

- Age: 35–54
- Gender: Male
- Location: Switzerland (English-speaking, might understand french)
- Role: Craftsmanship profession
- Profile: Rugby fan planning attendance months in advance, heavy content consumers

Goals and Success Criteria:

- Research tournament schedules, event calendars, and travel options
- Compare options before committing
- Ensure reliability and trustworthiness of providers

Pain Points and Barriers:

- Fragmented or inconsistent content across events
- Difficulty understanding full package inclusions
- Lack of early-stage guidance in English

Decision Drivers:

- Access to comprehensive, structured content (blogs, guides, calendars)
- Clarity on pricing and package options
- Trust signals (official authorizations, testimonials, experience)

Preferred Channels and Touchpoints:

- Desktop for in-depth research
- Organic search for discovery of calendars and event info
- Referral sites and newsletters for updates and reminders

7. SWOT Analysis

Strenghts	Weaknesses
• **All-inclusive, mid-to-premium packages** (Section 2.1, 2.2) that simplify complex event travel. • **Official partnerships and credibility** (F1 authorization, Tour de France experience; Section 2.2, 3.3). • **Strong SEO-driven traffic** (Organic Search 83.9%; Section 4.4) and desktop engagement (Section 5.2). • **Multilingual website and international reach** (Section 3.3), enabling service beyond French-only competitors. • **Personalized customer service** including pre-trip support and on-site assistance (Section 4.3, 3.3).	• **Mobile experience underperforming** despite representing 78% of traffic (Section 4.4, 5.2). • **Limited early-stage content in English** reduces reach to non-French-speaking potential customers (Section 4.2). • **Packages not highly flexible** compared with luxury or bespoke competitors (Section 3.3). • **Dependence on DIY alternatives** (ticket-only resellers) for price-sensitive segments (Section 3.1, 3.3).
Opportunity	**Threats**
• **Content-driven customer acquisition** through blog calendars, event guides, and social campaigns (Section 4.2, 8.2). • **Conversion of ticket-seekers to full-package buyers** leveraging high-intent organic search traffic (Section 3.1, 3.2). • **International audience growth** targeting English-speaking markets with improved content and mobile UX (Section 5.2, 4.2). • **Upselling optional services** (hospitality, transport, add-ons) to increase average transaction value (Section 2.1, 3.3).	• **Direct competitors with premium/luxury offerings** (F1 Experiences, large tour operators) may capture high-spending users (Section 3.3). • **DIY alternatives and ticket-only resellers** undercut mid-market pricing and appeal to cost-conscious customers (Section 3.1, 3.2). • **Market seasonality and event dependency** create revenue fluctuations (Section 4.4, 5.1). • **Potential international language and service gaps** limit full global expansion (Section 4.2, 5.2).

Part II: SEO

For data analyzes, see Part 2 - SEO

1. Speed Audit

1.1 Performance Metrics Overview

Metric	Mobile	Desktop	Notes
LCP (Largest Contentful Paint, <2.5 s)	1.1–1.3 s	0.9–1.4 s	Main content loads quickly on both devices
INP (Interaction to Next Paint, <200 ms)	123–157 ms	53–61 ms	Desktop interactions faster; Mobile slightly slower but acceptable
TBT (Total Blocking Time, Desktop <100 ms / Mobile <300 ms)	380–790 ms	180–1150 ms	Product Page Desktop blocking time high (1150 ms)
CLS (Cumulative Layout Shift, <0.1)	0.12–0.21	0.01	Desktop stable; Mobile slight layout shift on Homepage
FCP (First Contentful Paint, <1.8 s)	0.9–1 s	0.8–1 s	Server response and initial rendering fast
Speed Index (Mobile <6 s / Desktop <3 s)	4.6–7.1 s	0.9–1.6 s	Mobile Product Page slower; Desktop very fast
TTFB (Time to First Byte, <0.8 s)	0.4–0.5 s	0.5–0.7 s	Server performance good

1.2 Key Observations

Largest Contentful Paint (LCP) & First Contentful Paint (FCP):

- LCP measures how quickly the main visible content (e.g., hero image or headline) appears. Industry best practice considers *LCP under 2.5 seconds as "good."*
- MYCOMM shows strong performance on both Mobile (1.1-1.3 s) and Desktop (0.9-1.4 s), meaning users can see the primary content almost immediately after page load.
- FCP values confirm fast initial rendering, indicating efficient server response and front-end rendering performance.

Interaction to Next Paint (INP):

- INP evaluates responsiveness - how quickly the page reacts to user interactions (clicks, taps). A value *under 200 ms is considered good* responsiveness.
- Desktop (53-61 ms) demonstrates excellent responsiveness.
- Mobile (123-157 ms) remains within a good performance range, although slightly slower compared to Desktop due to device and CPU limitations.

This suggests MYCOMM provides smooth interaction performance across devices.

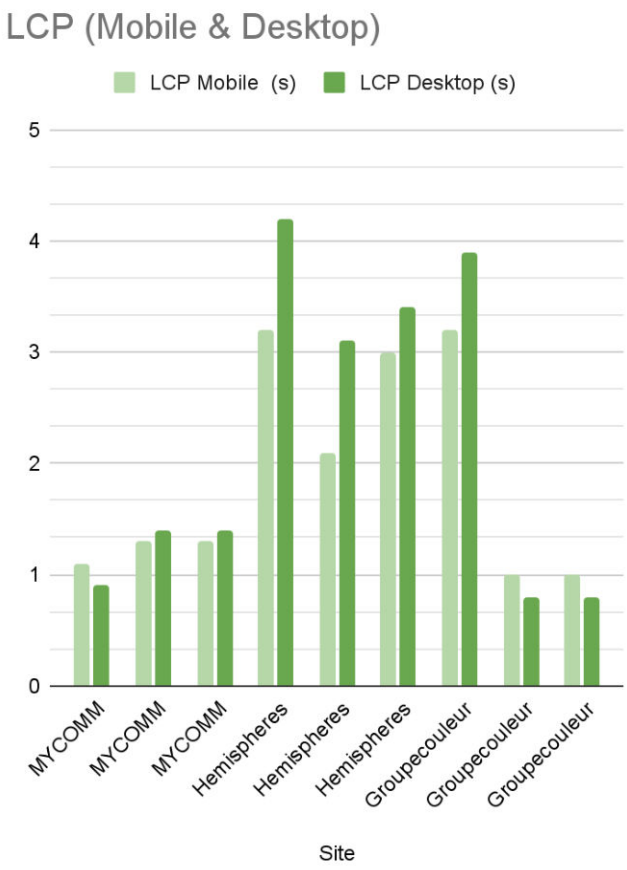
Total Blocking Time (TBT)

- TBT measures how long the main thread is blocked by JavaScript execution, potentially delaying user interaction.
- Recommended / Ideal TBT values: Desktop: *under 100 ms and* Mobile: *under 300 ms*
- The Product Page Desktop shows a high TBT value (1150 ms). While the page loads quickly (good LCP), heavy script execution may delay interactivity such as button clicks or form inputs.
- Other pages show moderate blocking time, but the Product Page Desktop represents the main optimization opportunity.

Cumulative Layout Shift (CLS)

- CLS measures visual stability - how much content shifts during loading. A CLS score *below 0.1 is considered good*.
- Desktop (0.01) is highly stable.
- Mobile Homepage (0.21) shows noticeable layout shift, likely caused by images, banners, or dynamically injected content loading without reserved space.
- Improving this would enhance perceived quality and reduce accidental clicks.

1.3 Comparative Analysis



MYCOMM demonstrates consistently faster Largest Contentful Paint across all three page types compared to Hemispheres and Groupecouleur. The performance advantage is particularly strong on Desktop.

The competitors show significantly slower load times on Homepage and Category pages, which may impact bounce rate and first impressions.

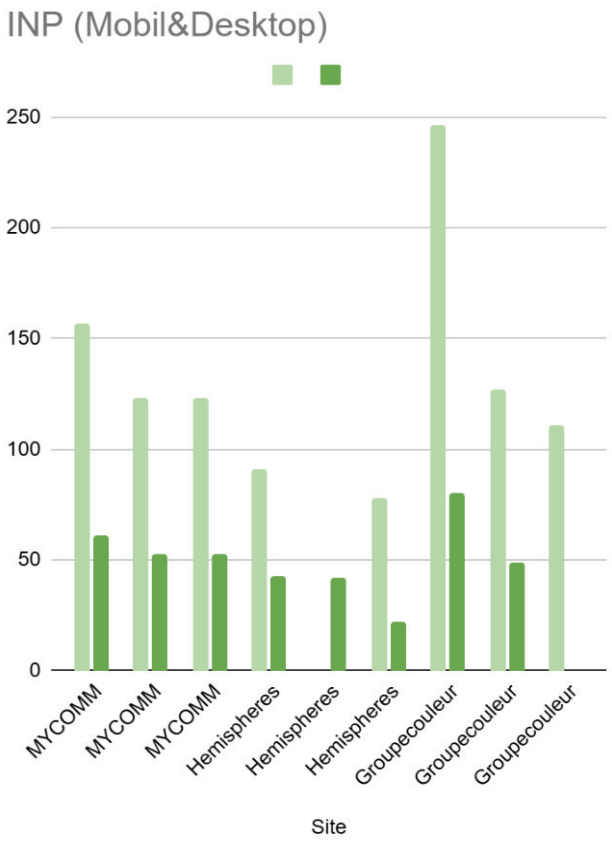
MYCOMM maintains strong responsiveness on Desktop and competitive performance on Mobile.

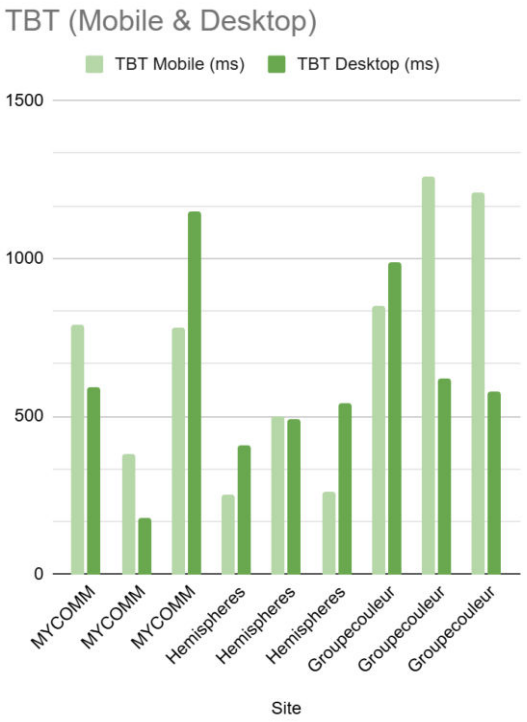
While some competitor pages show acceptable interaction times, MYCOMM delivers more consistent responsiveness across page types.

Product Page Desktop TBT in MYCOMM is high (1150 ms), significantly exceeding recommended thresholds (under 100 ms for Desktop and under 300 ms for Mobile). This level of main-thread blocking may delay

interactivity, particularly during user actions such as clicking CTAs or interacting with dynamic components. Competitors show uneven performance: Hemispheres demonstrates slower LCP across several pages, while Groupecouleur exhibits elevated TBT on mobile category pages, exceeding the ideal mobile threshold.

This indicates that script optimization represents the main technical improvement area for MYCOMM.





1.4 Summary and Recommendations

Strengths

- Fast LCP and FCP across all pages - users see primary content almost immediately, reducing perceived load time and lowering bounce risk.
- Low CLS and excellent INP on Desktop- stable layout and responsive interactions create a smooth and predictable user experience.

Opportunities

- Reduce TBT on Product Page Desktop by optimizing JavaScript execution and deferring non-critical scripts.
  Splitting large JS bundles, removing unused scripts, and delaying third-party code

will reduce main-thread blocking, resulting in faster interactivity, improved user experience, and potentially higher conversion rates.
- Improve CLS on Mobile Homepage by stabilizing layout elements during load. Reserving space for images and dynamic components will reduce layout shifts, prevent accidental clicks, and strengthen user trust.
- Optimize Speed Index on Mobile Product Page (7.1 s) by prioritizing above-the-fold content and improving resource loading.
- Preloading critical assets and implementing efficient lazy loading will enhance perceived performance, keep users engaged, and support better conversion outcomes.

Competitive Advantage

MYCOMM demonstrates stronger loading performance and interface stability compared to competitors. By addressing the identified optimization areas, the site can further strengthen user experience quality and conversion efficiency across devices.

2. Technical audit

2.1 Titles Audit (Table 1)

- All pages contain title tags
- Titles appear unique across the site
- Title length is generally within the recommended range (50–60 character)
- `/faq` page title is short (12 characters), but this is acceptable for faq

2.2 Meta Descriptions Audit (Table 2)

- Most pages contain meta descriptions (1 missing)
- Meta description length is generally within the recommended range (140–160 characters)
- Descriptions appear unique across pages
- The cart page meta description is short, but this is acceptable since transactional pages are typically not optimized for search visibility

Issue identified:

- The /faq page has no meta description

Recommendation: /faq meta description: Add a meta description within the 140–160 character range that summarises the page content and includes a soft call to action. A suggested meta description would be:

> *"Got questions about booking a sports travel package? Find answers about our all-inclusive trips, tickets, hotels, and transport for rugby, F1, football and more."*

This is 157 characters, targets FAQ-type queries, and reinforces MYCOMM's core value proposition directly in the search result snippet.

2.3 H1 Audit (Table 3)

- Most pages contain one H1 tag (2 missing)
- 3 pages contain two H1 tag, which the tool flags as technical issue, but in practise it is not problematic
- H1 tags appear unique and descriptive
- The /cart page is missing an H1 tag; however, as a non-indexable transactional page, this has minimal SEO impact.

Issues identified:

- The /faq page has no H1
    - It can weaken on-page structure; however, it won't hurt rankings dramatically, and Google does not require an H1 for indexing.

Recommendation: /faq H1: Add a clear, keyword-rich H1 that signals the page purpose to both users and search engines. A suggested H1 would be:

> *"Frequently Asked Questions - Sports Event Travel with MYCOMM"*

This targets informational queries from users researching sports travel packages, reinforces topical relevance, and improves internal page structure.

2.4. Issues Audit (Table 4)

Technicals Recommendations (High & Medium)

Priority: High

Canonicals: Canonicalised

- Page affected `:/categorie/voyage-rugby`
- Indexability: **Non-Indexable**
- Status: **Canonicalised**
- Canonical URL: `/category/voyage-rugby`

This tells search engines not to index the French-slug category page, and index the English version instead. This configuration may prevent the rugby category page from ranking and reduce organic visibility.

Fix: The canonical tag for the rugby category page should be corrected to a self-referencing canonical, and duplicate category URL versions should be redirected to ensure the page remains indexable.

Priority: Medium

Low Content Pages

- https://www.mycomm.fr/cart

- https://www.mycomm.fr/contact
- https://www.mycomm.fr/blog
- https://www.mycomm.fr/faq
- https://www.mycomm.fr/categorie/autres-sports/billet-voyage-nfl

  Fix: Review pages and add more descriptive content where relevant.

  For instance, for /faq page expanding answers with more detailed explanations can improve keyword coverage, internal linking opportunities, and visibility in SERP features such as “People Also Ask.

2.5 Additional Issue Identified

No FAQ page on the English version of the site

The /faq page currently exists only in French. The absence of an English FAQ page represents a missed opportunity on two levels:

- **Trust barrier:** International users arriving via organic or paid channels have no equivalent support page to answer pre-purchase questions, which may increase drop-off at the consideration stage.
- **SEO gap:** FAQ pages are particularly valuable for capturing "People Also Ask" SERP features and long-tail informational queries, both of which are especially important in new markets where brand awareness is low.

Recommendation: Once the English site is more developed, prioritise creating an English /faq page. Content can be adapted directly from the French version. This is a low-effort, high-impact action that directly supports the international expansion strategy.

3. **Semantic SEO audit**

Note, we've analysed in the first place data from the primary market (France) as it was the most significant datasets and biggest traffic footprint. We've added in each section a note about the two most important international markets in terms of organic traffic (Belgium and Canada).

3.1 Performance overview

As of February 2026, MYCOMM ranks for 16,800 keywords on Google France, a slight decline of -2.08% compared to January. Organic traffic stands at 81,700 visits (-5.65%). An encouraging signal for MYCOMM is that the traffic cost value reaching 15k€ (+25%), meaning that despite the slight volume dip, the keywords we're ranking on are becoming increasingly valuable. Non-branded traffic overwhelmingly dominates with more than 95 of the total traffic being non-branded.

Beyond its core French market, MYCOMM generates a small international footprint, ranking for 452 keywords in Canada and 338 keywords in Belgium, both markets driven primarily by French-language content and keywords overlap rather than deliberate international targeting.

A language analysis done with the help of an LLMs agent reveals that English accounts only for 2.5% of keywords in French keywords and less than 1.8% of the traffic. In that case, English keywords that do rank (like "`Mercedes-Benz Stadium`", "`World Cup 2026`") generate some traffic but are mostly stadium names where English is the proper noun. The Belgium dataset has almost exclusively French-language keywords, with only 1 English keyword in the entire dataset ("f1 2026 calendar" at position 89 with zero traffic). This confirms Belgium is a pure French-speaking market for MYCOMM.fr. The situation is similar for Canada.

Filtering for French keywords that account for at least 0.5% of organic traffic reveals that just 22 keywords out of 10k+ (less than 0.2% of the keywords) are responsible for approximately 32% of total organic traffic. It is an extreme concentration that means that the site's traffic is

dangerously dependent on a handful of rankings. It would be interesting here to correlate conversion and traffic from these keywords to assess the risks and performance.

3.2 Ranking distribution

In February, MYCOMM full keyword portfolio of 16K+ KW on Google France (Desktop) is heavily weighted toward mid-to-long-tail positions rather than the top results.

The largest segment sits in positions 21-50 with 4,521 keywords, closely followed by positions 51-100 with 4,349 keywords, meaning that over half of the entire keyword base ranks beyond position 20 (which isn't visible). Keywords in positions 11-20 account for 2,240 and those in positions 4-10 for 2,648, representing solid but not yet dominant first-page presence. The **top 3** positions account for **only 739 keywords,** just 4.4% of the total portfolio.

Overall, MYCOMM's keyword distribution is this of a domain with broad topical reach but significant potential when it comes to converting positions 21-100 keywords into first-page rankings through targeted content improvements and technical SEO.

3.3. Keyword categories and volumes

The list of keywords bringing organic traffic is available here. From the keyword ranking, we can identify several semantic sport universes that match MYCOMM product offerings.

- **Rugby**: It is MYCOMM's largest and most strategically important semantic cluster, accounting for 3,577 keywords and generating **19,655 visits**. The cluster covers a wide range of sub-topics including the Six Nations, Autumn Nations Series, Top 14, Nations League, Champions Cup and the Crunch, with **639 keywords in the top 3** and 1,719 **in the top 10**, the strongest top-10 presence of any cluster on the site. Top traffic drivers include "`ligue des nations 2025`" (position 3, 543 visits), "`crunch`" (position 1, 488 visits) and "demi finale top 14 2026" (position 1, 471 visits). Given the Six Nations package strategy currently being developed, this cluster represents the highest commercial conversion opportunity on the entire domain.

- **Football and stadium** (esp. Camp Nou & Real Madrid): The football stadiums semantic cluster ranks second by traffic volume with **17,936 visits** across 1,117 keywords, driven almost entirely by "`Camp Nou renovation`" content and Real Madrid ticketing. More than 500 keywords rank in the top 3. The standout performers are "`real madrid club de fútbol`" at position 1 (4,050 visits), "`matchs de FC Barcelone`" at position 2 (1,215 visits) and the various "Camp Nou" renovation keywords clustering around positions 1-2. While the traffic is substantial, the intent is largely informational and the commercial opportunities are not very clear (unless there is an active traffic to the related product offering pages from these blog posts.

- **Tennis** (Rome & Madrid & Monte Carlo): Despite being the smallest cluster by keyword count with only 371 keywords, tennis generates a high amount of **14,095 visits**. This is driven primarily by the Rome tournament product page, with "`tournoi de tennis de rome`" at position 1 alone generating 4,488 visits, followed by "`ATP Rome`" at position 4 (1,331 visits) and "`tournoi de Rome`" at position 3 (880 visits). With 107 keywords in the top 3 and 233 in the top 10, this semantic cluster represents a lot of opportunities despite leaning slightly more on the informational side.

- **Football / Coupe du Monde 2026** (Worldcup 2026): This cluster covers 1,200 keywords generating **13,850 visits**. It is built almost entirely around qualification and calendar content. Key rankings include "`éliminatoire coupe du monde 2026`" at position 3 (3,321 visits), "`éliminatoires pour la coupe du monde`" at position 8 (1,176 visits) and "`qualification coupe du monde 2026`" at position 9 (990 visits). With 301 keywords in top 3 and 583 in top 10, this is a high-performing informational cluster that benefits from strong seasonal search demand.

- **F1 / Motorsport**: This cluster accounts for 1,776 keywords generating **7,971 visits**, with 322 keywords in top 3 and 778 in top 10. The cluster spans F1 season calendars, individual Grand Prix events (Monaco, Barcelona, Monaco, Monza), MotoGP and driver news, with top performers including "`calendrier F1 2025`" at position 7 (526 visits), "`nouvelle écurie F1 2026`" at position 1 (178 visits) and "`GP Monaco 2025`" at position 2 (173 visits). The F1 cluster has strong commercial potential through Grand Prix ticket product pages but currently skews informational, suggesting a similar internal linking strategy to the to the rugby and football clusters would meaningfully improve commercial conversion.

If we compare this with the smaller datasets from Canada and Belgium, we find a slightly different breakdown. The tennis semantic cluster is also the highest performer internationally, driving +55% of Belgian traffic and 25% of Canadian traffic. However the football cluster is Canada's single dominant traffic driver, with 32.7% of keywords and 59.5% of traffic. Rugby, despite being the most important cluster of French keywords and traffic, is virtually absent internationally (less than 4% of both countries' traffic), meaning that rugby content has no organic pull beyond France. It could be that the technical indexing issue found on the rugby section is slightly impacting that.

One commercial assumption would therefore be that international audiences are more likely to buy MYCOMM's tennis offering. Based on that, we would suggest adjusting our persona 2 and 3, which we initially made interested in F1 and Rugby. Another assumption would be that the limited English content on Rugby and F1, as well as the strong competitor footprint, is making MYCOMM's offering less visible. In which case, we would maintain our initial proposition. This is hard to assess without access to customer profiles and product conversion.

3.4 Summary of categories and their performances

Cluster	Keywords	% of KWs	Traffic	% of Traffic
Rugby	4,305	43.0%	22,671	27.7%
Football / Stades	903	9.0%	16,869	20.6%
Tennis	358	3.6%	14,091	17.2%
Football / Coupe du Monde 2026	1,087	10.9%	13,567	16.6%
F1 / Motorsport	1,971	19.7%	8,976	11.0%
Autres / Divers (branded)	870	8.7%	4,767	5.8%
Cyclisme / Tour de France	322	3.2%	548	0.7%
Basketball / NBA	184	1.8%	260	0.3%

As mentioned, we can notice that **tennis is the most traffic-efficient cluster:** it represents only 3.6% of the keyword portfolio yet generates 17.2% of total traffic. Rugby, on the other hand, accounts for 43% of all keywords but only 27.7% of traffic, meaning a large portion of the rugby keyword base is ranking without meaningfully converting into visits. F1 follows a similar pattern, suggesting mid-to-low position rankings or hard competition. The two football clusters together cover 19.9% of keywords and deliver 37.2% of traffic, confirming they remain an important part of organic performance.

Keywords by Intent

Intent		Keywords	Traffic
Informational	68.7%	13.8K	67K
Navigational	5.5%	1.1K	10.6K
Commercial	14.5%	2.9K	6.8K
Transactional	11.2%	2.3K	8.5K

Search intent

Informational intent dominates overwhelmingly, accounting for 68.7% of all French keywords. So roughly ⅔ of the entire organic footprint is built on content that attracts users who are researching, not buying. This is quite consistent with the editorial approach taken across the french blog, which covers stadium renovations, tournament calendars, qualification rounds and rugby terminology.

It's interesting to note a navigational intent anomaly with just 5.5% of keywords that generate more than 10k visits. Some keywords seem to be wrongly classified by SEMRush. For example "*madrid open*", "*real madrid club de fútbol*" and "*atp rome*" being rather informational keywords than navigational.

Commercial intent covers 14.5% of keywords and generates only 6,800 visits, and transactional intent accounts for 11.2% of the keywords with 8,500 visits. Together, these two revenue-driving intent categories represent 25.7% of the keyword base but only 18.8% of total traffic. The site has minimal presence for the natural follow-on queries that signal purchase intent: "*acheter billets tournoi 6 nations 2026*", "*forfait voyage six nations avec hôtel*", "*package tout compris coupe du monde 2026 france*". These bottom-of-funnel keywords are either unranked or sitting in positions 20-50, where they generate negligible traffic.

Across secondary markets (Canada/Belgium), the informational intent is even more important, probably meaning that the international audience is almost exclusively in research mode. The commercial intent in Canada and Belgium are both significantly lower than in France.

→ We can see here that MYCOMM.fr has built a TOFU audience but has not yet engineered the keyword strategy to capture users further down in the funnel. Closing this gap through stronger commercial and transactional content, better product page optimisation and systematic internal linking from informational articles toward booking pages is a clear path to improving performance as explained in our keywords recommendations.

3.5 Ranking pages

We focused here on the keywords and their associated ranking pages that are getting at least 0,5% of the overall organic traffic (the 22 keywords mentioned above). Only 10 distinct URLs capture traffic from these keywords:

- **The Rome tennis product page** (`/produit/billet-tournoi-rome`) is the single most popular organic page on the site, attracting 6 keywords and generating a combined 8,619 visits (10.5% of total traffic).
- **The World Cup** qualifiers blog, a high-volume informational content piece, (`/blog/calendrier-eliminatoires-coupe-du-monde-2026`) follows with 4 keywords and 5,921 visits (7.23%), confirming the traffic power of timely,
- **The Camp Nou blog** (`/blog/nouveau-camp-nou-barcelone`) contributes 3,925 visits (4.78%) across 4 keywords, while the Real Madrid pricing page (`/blog/prix-billet-real-madrid`) generates 4,050 visits from a single keyword alone its top position for "real madrid club de fútbol" (450,000 monthly searches) doing all the heavy lifting.

Beyond these four pages, the remaining six URLs each contribute between 471 and 1,040 visits, covering the homepage, Madrid and Rome tennis product pages, the Nations League calendar, the F1 2025 calendar, the Crunch rugby article and the business subdomain's Top 14 VIP page.

3.6 Keyword recommendations

We've seen that across both France and international markets, commercial and transactional keywords remain significantly underrepresented relative to the informational content. To capture a larger share of high-intent traffic, the priority should be on targeting transactional-intent keywords and developing dedicated BOFU content. Strengthening the BOFU layer would allow MYCOMM to monetise an audience it has already earned

We should therefore aim to intercept people with a purchase intent, investigating package solutions for example. Given the high volume existing on the Rugby cluster, we could imagine a cluster around "Rugby travel package" for the Six Nations and EU championship finals, that would appeal to our persona 1, Alain ("Rugby-Alain, the mid-age sports planner". These queries would combine match demand with accommodation or travel packaging, directly matching MYCOMM's core rugby offering.

Primary commercial targets KW (we can also pick only one from that list since they are all semantically related)

EN speaking audience Relevant if we decide to maintain the objective of commercializing rugby offering to international audiences	**FR speaking audience**
• six nations travel packages • six nations ticket and hotel packages • france vs england six nations package • france vs ireland six nations travel package • six nations paris travel package • champions cup final travel packages • champions cup final ticket hotel package • challenge cup final travel package • rugby final weekend packages	• forfait voyage tournoi des 6 nations • package voyage tournoi vi nations • séjour tournoi des six nations • forfait billet + hôtel tournoi 6 nations • package billet hôtel six nations • séjour billet hôtel tournoi vi nations • forfait france angleterre tournoi 6 nations • package france vs angleterre six nations • séjour match france angleterre vi nations • séjour match france irlande vi nations • forfait voyage tournoi 6 nations paris

Our competitor analysis showed strong presence from federation-linked agencies and ticket resellers. Ranking product pages on "ticket + hotel" combinations is critical to compete with both.

3.7 Article recommendation

We can recommend MYCOMM to write a new blog article targeting these BOFU keywords. For example, a guide about traveling to the tournament:

H1	Séjour Tournoi des Six Nations 2026: le guide ultime pour supporters

URL	`/blog/guide-forfait-voyage-tournoi-6-nations`
MT	Forfait voyage Tournoi 6 Nations 2026 | Guide complet MYCOMM

4. Netlinking audit

4.1 Key Metrics

	MYCOMM
Total Backlinks	2748
Referring Domains	1784
Authority Score	40
New Referring Domains	28
Lost Referring Domains	34
Backlinks/ Domain Ratio	1,54

% Follow Links	85,62%
% Nofollow Links	14,38%

With 1,784 referring domains, MYCOMM has a large raw domain base. However, the backlinks-to-domains ratio of 1.54 is a warning sign: it means almost every domain links only once, which is a hallmark of spam networks rather than genuine editorial endorsement. Legitimate sites tend to link from multiple pages over time, producing ratios well above 3-4.

4.2 Toxicity Analysis

Semrush's Backlink Audit rates MYCOMM's overall toxicity as HIGH. The breakdown:

Domain Category	Estimated Volume	Share
Toxic Domain	~1380	79%
Potentially Toxic	~107	6%
Non-toxic domains	~268	15%

Of MYCOMM's 1,784 referring domains, only ~268 (15%) are genuinely useful for SEO. The remaining 1,487 domains (85%) are either harmful or borderline, actively dragging down the domain's trust signals in Google's eyes.

4.3 Authority Score (AS)

MYCOMM's AS of 40 appears strong, but it must be interpreted carefully. Semrush's AS algorithm is partly driven by raw Follow link volume. With 2,748 backlinks at 85.62% Follow, MYCOMM is sending ~2,353 Follow signals to Semrush's crawler, which mechanically inflates the score regardless of source quality.

For MYCOMM, having 85.62% Follow links sounds like a massive advantage, and it would be, if those links came from legitimate sites. The problem is that the vast majority come from toxic domains. So instead of receiving trust signals from credible sources, MYCOMM is receiving high volumes of "vouching" from spam farms, which Google increasingly discounts or penalises. Therefore, authority score does not reflect genuine domain authority.

Types of toxic domains identified:

- **Auto-generated Blogspot sites** (goojiie.blogspot.com, ecovibesjk.blogspot.com, hautepursesuitsg.blogspot.com, etc.)
    - These are free blog platforms where pages are often created automatically just to place links. They usually have no real audience and are commonly used in spam link campaigns.

- **pages.dev domains** (Cloudflare Pages)

    - This is a free website hosting service. While legitimate in some cases, it's frequently abused to create fake websites that exist only to link out artificially (a tactic known as Private Blog Networks).

- **firebaseapp.com / .web.app domains** (Firebase / Google)
    - Similar to pages.dev, these are free hosting platforms. Spammers often generate large numbers of low-quality sites here purely to build artificial backlinks.
- **.sbs / .cfd / .shop TLDs**
    - These are very cheap domain extensions. Because they are inexpensive and easy to obtain in bulk, they are often used in large-scale spam link campaigns.

- **Domains with (0 - 2) Authority Score**
    - Negligible in SEO value but damaging to trust signals.

4.4 Top Countries

Country	Referring Domains	%
US	217	18%
France	94	8%
Singapore	47	4%
Moldova	12	<1%
Germany	8	<1%
Switzerland	6	<1%

Semrush identifies the top 5 source countries among MYCOMM's 1,784 referring domains. Within this visible sample, the United States accounts for 217 domains, France for 94, Singapore for 47, Moldova for 12, and Germany for 8, the remaining ~1,400 domains are not broken down by country in the available data.

Even as a partial picture, this distribution is notable: for a French sports travel agency, the fact that the US and Singapore together represent more identified domains than France suggests a significant proportion of links originate outside the target market. This pattern is often associated with international spam networks rather than genuine editorial endorsement from French sports and travel media, a conclusion reinforced by the overall HIGH toxicity rating of the profile.

4.5 Competitors Comparison

This netlinking audit compares MYCOMM (mycomm.fr) with two competitors:

- Groupe Couleur: groupecouleur.com
- Hemispheres Voyages: hemispheres-voyages.fr

	MYCOMM	**Groupe Couleur**	**Hemispheres Voyages**
Number of backlinks	2748	7051	2005
Referring domains	1784	1042	879
Authority Score	40	39	31
New Referring Domains (Last 30 days)	28	96	44
Lost Referring Domains (Last 30 days)	34	57	43

Groupe Couleur has 7,051 backlinks from 1,042 referring domains, giving a ratio of 6.8. This suggests stronger partnerships or editorial coverage. The domain also shows strong growth momentum, with 96 new referring domains recently, compared to 28 for MYCOMM.

Hémisphère Voyages shows a backlink depth ratio of 2.28, with a slightly positive net growth (+1 referring domain), indicating a stable backlink profile.In comparison, MYCOMM has 2,748 backlinks from 1,784 referring domains, resulting in a ratio of 1.54. Overall, MYCOMM demonstrates backlink volume across many domains, but not necessarily strong link quality or depth. Both competitors show stronger growth dynamics and more backlinks per referring domain, which typically reflects a more robust and authoritative netlinking profile.

4.6 Recommendations

1. **Disavow toxic links**

Remove or disavow harmful backlinks to improve trust signals and reduce penalty risk. A temporary drop in Authority Score is normal and expected after cleanup.

2. **Rebuild with French, sector-relevant links**

Increase the share of French referring domains from 22% to at least 50% of the backlink profile. Benchmark: Groupe Couleur and Hémisphère Voyages both have 70–90% French-based links, showing stronger local relevance.

3. **Improve backlink depth**

Strengthen relationships with partners who can link from multiple pages (event recaps, destination guides, sponsor pages). Target: increase the backlinks-per-domain ratio from 1.54 to at least 3.0.

4. **Monitor competitor link acquisition**

Track competitor backlinks monthly in SEMrush to identify new referring domains.
For example, Groupe Couleur recently gained 96 new domains, these sources represent potential outreach opportunities.

5. **Create linkable content assets**

Publish and distribute content designed to earn backlinks naturally, such as:

- sports travel guides
- tournament itinerary templates
- post-event reports
- data-driven studies (e.g., cost of attending major sports events)

These assets increase the likelihood of links from journalists, bloggers, and industry websites.

+ **Align Netlinking Strategy with Geographic Expansion**

As the project is currently considering expansion into Canada and Belgium, the above netlinking actions (steps 1–5) should be replicated and localized for each new target market

5. Updated personas

Persona 1: Rugby-Alain, the mid-age sports planner

- Age: 45-55
- Gender: Male
- Location: France
- Role: Professionals with disposable income
- Profile: Rugby fan, seeking curated travel experiences for major sporting events

Goals and Success Criteria:

- Attend major sporting events without organizational hassle
- Maximize comfort, reliability, and event access
- Have a memorable, social experience with friends or family

Pain Points and Barriers:

- Complexity of booking international travel and event tickets separately
- Lack of official access or guarantee for popular events
- Difficulty navigating mobile interfaces for complex bookings

Decision Drivers:

- All-inclusive packages with official event tickets
- Group discount for friends
- Proven reliability and experience of the agency (Trustpilot reviews, years in market)
- Mid-to-premium price positioning that balances cost with quality

Preferred Channels and Touchpoints:

- Desktop website for detailed research and booking
- Email for reminders and targeted offers
- Blog and calendar content for event planning inspiration

Persona 2: Tennis-lovers Tom & Natalia

- Age: 25–34
- Gender: Male & Female
- Location: Belgium (English and French-speaking, ~~might understand french~~)
- Role: Early-career professionals (consultant/digital profession)
- Profile: Sports enthusiasts, digitally savvy

Goals and Success Criteria:

- Attend high-profile events like Tennis
- Share experiences on social media
- Discover new destinations and unique experiences

Pain Points and Barriers:

- Budget-conscious; sensitive to pricing vs. perceived value
- Limited time for trip research

Decision Drivers:

- Seamless online booking experience
- Visual and social proof content (videos, testimonials)
- Optional add-ons (transport, hospitality) that add convenience and personalization

Preferred Channels and Touchpoints:

- Mobile browsing for quick discovery
- Social media for inspiration (Instagram, YouTube, TikTok)
- Organic search for event-specific information and calendars

Persona 3: Yann, the Information-Seeker

- Age: 35–54
- Gender: Male
- Location: Switzerland (English- and French-speaking, ~~might understand french~~)
- Role: Craftsmanship profession
- Profile: Tennis fan planning attendance months in advance, heavy content consumers

Goals and Success Criteria:

- Research tournament schedules, event calendars, and travel options
- Compare options before committing
- Ensure reliability and trustworthiness of providers

Pain Points and Barriers:

- Fragmented or inconsistent content across events
- Difficulty understanding full package inclusions
- Lack of early-stage guidance in English

Decision Drivers:

- Access to comprehensive, structured content (blogs, guides, calendars)
- Clarity on pricing and package options
- Trust signals (official authorizations, testimonials, experience)

Preferred Channels and Touchpoints:

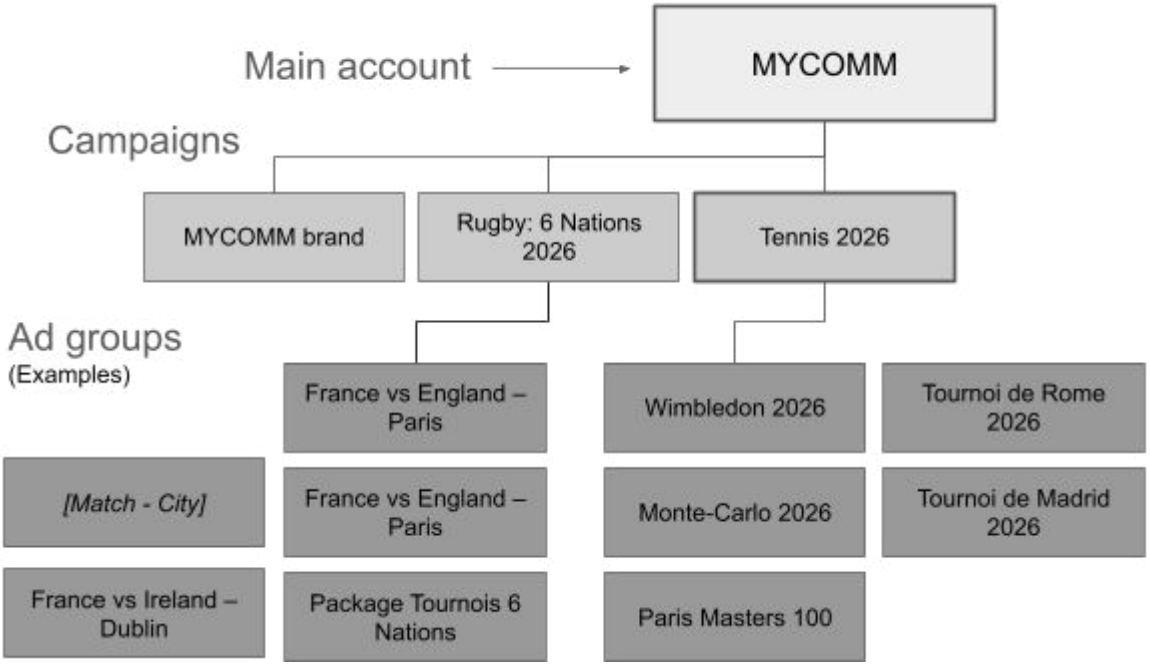
- Desktop for in-depth research
- Organic search for discovery of calendars and event info
- Referral sites and newsletters for updates and reminders

Part III: SEA

For ads details, see Part 3 - Ads

1. Overview

1.1 Campaign structure



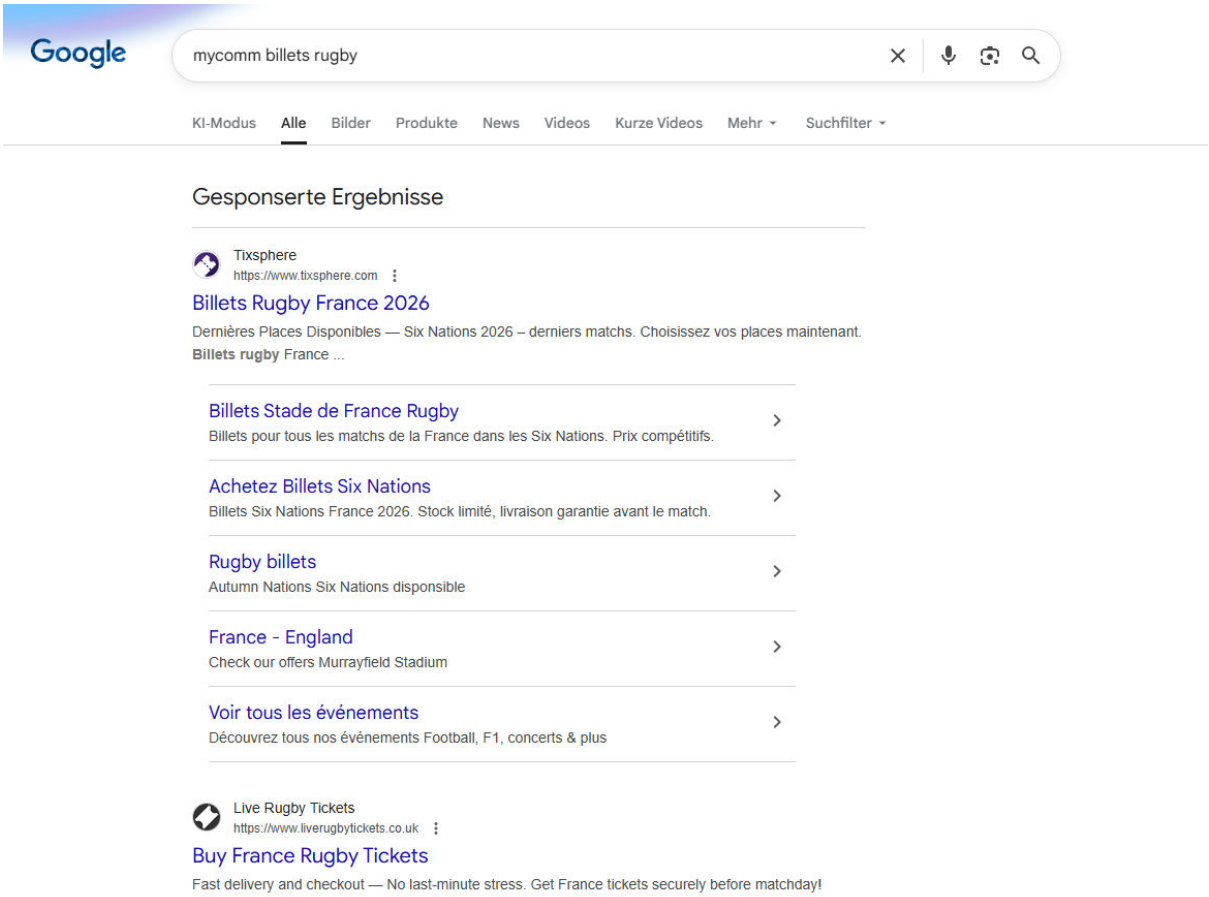
Given the low traffic of other spots (Basketball, Ice Hockey), we recommend creating campaigns only for **high-selling products** aligned with our personas (Rugby, Tennis). Based on this framework, the MYCOMM account will be structured around three active campaigns: Brand, Rugby 6 Nations 2026, and Tennis 2026. F1, Football, and Cycling are identified as future opportunities but fall outside the scope of this deliverable as they do not correspond to the currently defined personas.

Our **brand campaign** will function as a global “brand layer” across all sport verticals. By bidding on core branded queries such as “mycomm rugby”, “mycomm 6 nations”, or broader brand searches, we aim to secure with this campaign control over high-intent users already aware of us. This structure consolidates demand from every product line into a single protection campaign, maximizes Quality Score, minimizes CPCs, and ensures near 100 percent impression share on strategic brand terms.

Both sport campaigns follow an **event-specific structure**, organized around distinct events with dedicated ad groups, but at different levels of granularity reflecting the nature of each sport:

- **Rugby 6 Nations 2026** targets French-speaking domestic audiences in France, with ad groups organized by individual match and host city (e.g., France vs England — Paris), capturing the full spectrum of transactional demand across multiple matches and locations.
- **Tennis 2026** targets French and English-speaking international audiences in Belgium and Switzerland, with ad groups organized by tournament (Rome, Monte-Carlo, Madrid, Wimbledon). Intent targeting is differentiated by tournament based on MYCOMM's existing organic visibility in these markets.

We recommend allocating approximately 80% of the budget to our sport-specific campaigns and 20% to the Brand campaign. This split makes sense since brand searches are cost-effective but limited (lower volume), while sport searches are expensive but scalable. Sport campaigns targeting non-branded keywords like "*forfait six nations dublin*" or "*billet tournoi rome*" operate at higher CPCs and drive volume growth by reaching users who don't yet know MYCOMM exists, justifying the majority budget allocation. Brand campaigns function as defensive insurance against competitors (cf screenshot below), making the smaller brand investment economically essential.



1.2 Rugby campaign

We will create a dedicated campaign for the Tournoi des 6 Nations 2026 (and later for 2027) because it is a high-value, seasonal event with distinct search behavior and competitive pressure. A dedicated campaign allows precise budget allocation, tailored bidding strategies, and messaging aligned with strong transactional intent, avoiding performance dilution from other rugby competitions.

Given our limited starting budget and already strong organic visibility for informational 6 Nations queries (cf SEO analysis), our paid search activity will focus exclusively on high transactional intent. Informational searches are already captured via SEO and convert at lower rates in paid search, so targeting them with paid ads would dilute efficiency.

From SEO and traffic analysis, transactional intent can be segmented into three tiers:

- **Generic travel-intent:** Users searching for packages or weekend trips (e.g., “voyage 6 nations 2026,” “séjour rugby 6 nations”).
- **Match-specific transactional:**Users focused on a particular France match or city (e.g., “France Angleterre 6 Nations 2026 voyage,” “weekend Rome 6 Nations”).
- **Ticket-oriented hybrid intent**: Users primarily looking for tickets but open to packages (e.g., “billet 6 Nations 2026,” “ticket France Italie 2026”).

We recommend structuring the campaign around per-match ad groups, complemented by a big-package ad group for full-tournament experiences. This ensures message relevance, Smart Bidding optimization per conversion type, and efficient budget allocation, while avoiding spend on traffic already captured organically. By concentrating on match-, ticket-, and package-driven queries, the campaign maximizes budget impact, prioritizes high-AOV prospects, and captures the full spectrum of transactional demand for the 6 Nations.

1.3 Tennis campaign

We will create a dedicated Tennis campaign covering four major tournaments of 2026: Rome, Monte-Carlo, Madrid, and Wimbledon. Together they represent MYCOMM's strongest opportunity for international customer acquisition, specifically targeting French-speaking audiences in Belgium and Switzerland, aligned with Persona 2 (Tom & Natalia) and Persona 3 (Yann).

The SEO audit confirmed that tennis is the most traffic-efficient semantic cluster on the entire domain, generating 17.2% of total organic traffic from only 3.6% of keywords. More importantly, it is the dominant traffic driver in MYCOMM's two priority international markets: Belgium (55% of organic traffic) and Canada (25% of organic traffic), making it the natural lead product for the international expansion strategy defined in Step 1.

Organic visibility analysis by tournament in target markets

Before defining our paid search approach, we analyzed MYCOMM's existing organic rankings in Belgium and Switzerland to avoid paying for traffic already captured organically:

- **Rome:** MYCOMM ranks position 1 in Belgium for "tournoi de tennis de rome" (1,900 monthly searches, 471 organic visits) and "tournoi de rome" (1,600 monthly searches, 105 visits). Organic visibility is strong.
- **Monte-Carlo:** Rankings exist but are weak, sitting between positions 14-28 with zero organic traffic generated internationally.
- **Madrid:** Present in the Belgian dataset but ranking at position 14 or lower, generating minimal to zero international traffic.
- **Wimbledon:** Completely absent from international organic rankings. Zero traffic from Belgium or Switzerland. No organic discovery possible in these markets.

This analysis leads to a differentiated paid search strategy by tournament rather than a single uniform approach.

Keyword intent strategy by tournament

Given these differences in organic coverage, we apply the following logic:

- For **Rome**, where organic rankings are already strong in Belgium, our paid search activity focuses exclusively on transactional and commercial intent keywords.
- For **Monte-Carlo, Madrid, and Wimbledon**, where organic presence in our target markets is weak or entirely absent, we extend paid search coverage across the full funnel, from informational and commercial intent through to transactional.

Search intent segmentation

Keyword intent across the campaign covers three levels:

- **Transactional intent**: Users ready to book a complete package (e.g., "séjour tournoi de rome 2026," "billet wimbledon 2026 hôtel") → targeted across all four tournaments
- **Commercial intent**: Users comparing options before purchasing (e.g., "forfait billet hôtel monte carlo," "billet tournoi rome séjour") → targeted across all four tournaments
- **Informational intent**: Users in early planning stages researching destinations and events (e.g., "voyage monte carlo masters 2026," "wimbledon 2026 programme") → targeted for Monte-Carlo, Madrid, and Wimbledon only, where organic visibility in target markets is insufficient to capture this audience organically

2. Ad and keywords and expected landing pages

2.1 Persona #1: Rugby

For this exercise, we are proposing a sample ad group that would target users actively searching for *France vs England travel packages, tickets, or experiences in Paris* for our campaign "`Tournois des 6 Natoins 2026`" and within our Ad group "`France vs England - Paris`"

For Persona 1, Rugby-Alain, we are selling certainty, access, and simplicity. He wants to remove friction and risk from securing a package to the TD6N. This Ad campaign must position MYCOM as official and reliable, organized and stress-free and designed for groups. Therefore this ad group targets users searching specifically for France vs England tickets or travel packages in Paris, emphasizing certainty, official access, and stress-free group booking.

Keyword formula format:

- Match + city + intent (eg. "ticket", "séjour", "travel", "accès VIP").

Keyword	Match Type	Notes
billets france angleterre 6 nations *EN translation: *tickets france england 6 nations*	Exact	High-intent ticket search for the match in Paris
séjour france angleterre 6 nations paris *EN translation: *travel france england 6 nations Paris*	Phrase	Users looking for travel + match package in Paris

voyage france angleterre 6 nations paris *EN translation: *trip france england 6 nations*	Phrase	Transactional intent, all-in-one trip focus
billet officiel france angleterre rugby *EN translation: *official ticket france england rugby*	Phrase	Guarantees official tickets for the match
package VIP france angleterre 6 nations paris *EN translation: *VIP package france england 6 nations paris*	Phrase	Premium/VIP package, emphasizes reliability
ticket + séjour france angleterre paris *EN translation: *ticket + stay france england paris*	Phrase	Users open to both tickets and travel package
weekend france angleterre 6 nations paris 2026 *EN translation: *weekend france england 6 Nations paris 2026*	Phrase	Weekend-focused, city + match, high transactional intent

→ **Cf 📑 Part 3 - Ads for the copy proposition**

For this ad group, we created targeted, match- and city-specific ad copy for the France vs Angleterre match in Paris, aligned with the transactional keywords. Each of the ad variations integrates at least one keyword from the ad group, for a good relevance with user searches, improving Quality Score. The copy emphasizes official tickets, all-in-one packages, and stress-free group booking, directly addressing Rugby-Alain's persona. Titles and descriptions respect Google Ads best practice lengths.

2.2 Persona #2 & #3: Tennis

For this exercise, we are proposing a sample ad group targeting users actively searching for Rome Tournament travel packages, which is part of the "`Tennis`" campaign within the "`Tournoi de Rome 2026`" ad group.

This ad group serves both Persona 2 (Tom & Natalia, Belgium) and Persona 3 (Yann, Switzerland). While these personas differ in age, decision style, and geography, their search behavior for tennis event queries is essentially identical, both markets search predominantly in French with some English, and both target the same tournaments. The keyword strategy is therefore shared across both personas, with geographic differentiation handled at the campaign level through separate geo-targeting settings for Belgium and Switzerland.

Meaningful persona differentiation is applied in the ad copy, where titles and descriptions are tailored to each profile's emotional drivers, and will be further developed in the SMA

campaign (Step 3.2) where platform choice, creative format, and messaging tone can be fully customized.

Keyword formula: Tournament + city + intent, in both French and English, reflecting the bilingual profile of both personas.

Keyword	Language	Match Type	Intent	Notes
séjour tournoi de rome 2026	FR	Phrase	Transactional	High-intent travel search, planning-focused
forfait billet hôtel tournoi rome	FR	Exact	Transactional	Strong transactional intent, package clarity
voyage organisé tournoi rome tennis	FR	Phrase	Transactional	Organized trip focus, reduces planning friction
billet tournoi rome avec hôtel	FR	Exact	Transactional	Ticket + accommodation combination, high purchase intent
rome tennis tournament package 2026	EN	Phrase	Transactional	High-intent travel search for English-first searches
rome open tennis ticket hotel package	EN	Exact	Transactional	Transactional intent, all-inclusive focus
organised trip rome tennis 2026	EN	Phrase	Transactional	Appeals to need for a fully planned experience
meilleur package tournoi rome 2026	FR	Phrase	Commercial	Comparison stage, targets research behavior
tournoi rome 2026 prix voyage	FR	Phrase	Commercial	Price research before committing, planning-focused
agence voyage tournoi de rome 2026	FR	Phrase	Commercial	Agency comparison search, trust signal seeking
rome open 2026 travel options	EN	Phrase	Commercial	English comparison search, early research stage
rome tennis 2026 best packages	EN	Phrase	Commercial	Comparison stage in English, targets both personas

→ **See Part 3 - Ads for the copy proposition**

Persona 3 - Yann

For this ad group, we created targeted, tournament- and city-specific ad copy for the Rome Open 2026, aligned with the transactional and commercial keywords. Each ad variation integrates at least one keyword from the ad group, ensuring strong relevance with user searches and improving Quality Score. The copy is written in both French and English, reflecting Yann's bilingual Swiss profile and his tendency to search in both languages during his research process. The messaging emphasizes trust signals (agency experience since 2019, 33,000 satisfied travelers), clear package inclusions (billets, hôtel, transferts), and personalized service (devis sous 24h), directly addressing Yann's key decision drivers: reliability, transparency, and peace of mind. Titles and descriptions respect Google Ads best practice lengths.

Persona 2 - Tom & Natalia

For this ad group, we created targeted, tournament- and city-specific ad copy for the Rome Open 2026, aligned with the transactional keywords. Each ad variation integrates at least one keyword from the ad group, ensuring strong relevance with user searches and improving Quality Score. The copy is written in both French and English, reflecting Tom & Natalia's Belgian profile and their digitally savvy, experience-driven decision style. The messaging emphasizes excitement and FOMO ("sois là," "ne rate pas," "places limitées"), simplicity of booking, and a price anchor (dès 490€), directly addressing Tom & Natalia's key decision drivers: a seamless booking experience, social proof, and perceived value. Titles and descriptions respect Google Ads best practice lengths.

3. Campaign KPIs

3.1 KPI selection logic

The goal of the campaign is acquiring new customers for the MYCOMM website through Google Ads Search. KPI selection therefore follows a structured logic.

Since the objective is customer acquisition and the channel is high-intent Search advertising, the KPIs must measure performance and profitability rather than awareness or engagement.

3.2 Primary business KPI: New customer acquisition

The primary KPI of the campaign is the number of first-time customers generated via Google Ads Search. The campaign is not designed to increase visibility or traffic, but to convert high-intent users into new customers. To properly measure this KPI, conversion tracking must distinguish between:

- New customers (primary focus)
- Returning customers (secondary value)

Without this distinction, campaign success could be overestimated by counting repeat buyers.

3.3 Core acquisition KPIs

To understand how efficiently new customers are generated, the following performance KPIs are required:

Conversions

This measures the total number of completed bookings or qualified quote requests generated by the campaigns. This KPIs is useful because:

- It directly measures acquisition performance.
- It reflects transactional intent captured through high-intent keywords.
- It is the foundation for calculating efficiency metrics such as CPA and ROAS.

Conversions are prioritized over traffic metrics because traffic alone does not guarantee business impact.

Conversion Rate (CVR)

Conversion Rate = Conversions / Clicks. This KPI measures how effectively traffic converts once it reaches the website. It is particularly important in this strategy because:

- Campaigns are structured around highly specific match and tournament queries.
- Ads are aligned with transactional intent.
- Landing pages are event-specific.

If Conversion Rate is low, it could indicate:

- Misalignment between keywords and ad copy,
- Weak landing page experience,
- Incorrect audience targeting.

Therefore, CVR evaluates the structural quality of the campaign. It is selected instead of click volume as a success metric because efficiency is more important than raw traffic in an acquisition-driven strategy.

Cost per Acquisition (CPA)

CPA = Ad Spend / Conversions. This KPI measures how much it costs to acquire one customer. It is essential because:

- The objective is not only to acquire customers, but to do so sustainably.
- Acquisition must remain aligned with MYCOMM's internal profitability thresholds.

Even though MYCOMM's financial data (average order value and margin) is not provided in the case, CPA must be monitored to ensure that acquisition remains economically viable.

CPA is chosen over Cost per Click (CPC) because:

- CPC measures traffic cost.
- CPA measures actual business outcome cost.

Since the goal is acquisition, CPA is more strategically relevant than CPC.

Return on Ad Spend (ROAS)

ROAS = Revenue / Ad Spend. ROAS measures revenue efficiency. It is particularly relevant for our example because:

- The product is a high-value travel package.
- Order values may vary across events (Rugby vs Tennis).
- Scaling decisions require revenue-based performance evaluation.

ROAS is included because customer acquisition in high-ticket industries must also be revenue-conscious. While CPA measures cost per customer, ROAS evaluates total revenue efficiency, making it essential for budget allocation across campaigns.

Campaign-specific KPI considerations

Because the account includes different campaign types, KPI emphasis differs slightly:

Brand campaign

The purpose of the Brand campaign is demand capture and protection. Users searching for brand queries already demonstrate strong intent. Therefore the primary KPI will be conversions and an operational KPI will be impression Share. Impression Share is particularly important here because:

- Losing brand impressions means losing highly qualified users.
- Competitors may bid on branded keywords.
- Brand demand must be protected.

Impression Share is not used as a primary KPI in non-brand campaigns because those focus on efficiency rather than demand protection.

Rugby and tennis campaigns

These campaigns target high-intent, transactional queries. Therefore, the priority KPIs are:

- Conversions
- Conversion Rate
- CPA
- ROAS

Informational queries (in certain Tennis tournaments) may also require monitoring:

- Assisted conversions
- Funnel progression

This ensures that early-stage traffic contributes to eventual acquisition.

Media efficiency KPIs

These KPIs ensure structural quality of the account. The **Click-Through Rate (CTR** evaluates:

- Keyword relevance
- Ad copy alignment
- User interest

High CTR is expected due to:

- Match-specific segmentation
- Tournament-specific messaging
- Intent-driven keyword targeting

CTR is monitored because it directly impacts Quality Score and CPC.

Quality Score reflects:

- Ad relevance
- Expected CTR
- Landing page experience

The campaign structure (match-level and tournament-level segmentation) is specifically designed to improve Quality Score by increasing relevance. Quality Score is not a business KPI but an operational KPI, used to ensure cost efficiency and competitive positioning.

The following metrics are not selected as primary KPIs:

- Reach
- CPM
- Impressions
- Engagement Rate

These metrics are more appropriate for awareness or branding campaigns. Since the MYCOMM strategy focuses on transactional Search intent, performance and profitability metrics are more relevant.

Part IV: SMA

For conversion rates assumptions see Part 3.2 - SMA.xlsx

1. Proposed SEM campaign structure

1.1 Campaign Context

MYCOMM is launching a multi-market paid social campaign with a total budget of €6,000 to drive qualified leads for sports travel packages across three core personas. This document covers the campaign structure for two of three personas: a confirmed rugby vertical in France and an exploratory Tennis vertical in Belgium. Both campaigns run for 4 weeks. A third persona (Yann, Switzerland, Tennis) exists with a €1,500 market entry budget but is not covered in this exercise.

1.2 Personas Overview

Persona	Market	Sport	Demographics	Market status	Primary objective
Rugby-Alain	France	Rugby	45-55, desktop-first professionals	Confirmed vertical with existing brand presence	Maximize qualified lead generation and validate group booking dynamics
Tom & Natalia	Belgium	Tennis	25-34, mobile-first enthusiasts	New market with zero brand awareness	Build brand recognition and capture early leads
Yann	Switzerland	Tennis	35-54, desktop researcher	New market with zero brand awareness	*Not covered in this campaign structure*

1.3 Total Budget Split

Persona	Budget	% of total	rationale
Rugby-Alain (France)	€3,000	50%	Confirmed vertical with proven conversion history. Strategic investment in the core revenue driver.
Tom & Natalia (Belgium)	€1,500	25%	Market entry pilot. Lower investment reflects an exploratory nature and zero existing brand presence.
Yann (Switzerland)	€1,500	25%	*Not covered in this exercise*
Total	**€6,000**	**100%**	

2. Persona #1: Rugby-Alain

2.1 Context & Objectives

Rugby-Alain, aged 45-55, based in France. Desktop-first professional seeking curated, reliable sporting travel experiences for major rugby events. Values comprehensive information, official access guarantees, and hassle-free booking for himself and his group.

Rugby is a confirmed vertical with proven conversion history in France. MYCOMM has a strong brand presence and an established customer base in this market. This campaign represents a strategic investment in the company's core revenue driver, with a €3,000 budget designed to maximize qualified lead generation during peak booking season. Unlike exploratory pilots, this campaign prioritizes conversion optimization and scales proven tactics.

Funnel stage	Objective	KPIs
TOFU/MOFU	Reach rugby enthusiasts in France. Build consideration through trust signals and event expertise	Impressions, Reach, Landing Page Views, CTR
BOFU	Convert warm audiences into form submissions for rugby travel packages.	Form submissions, Cost per Lead (CPL)

2.2 Platform Selection & Budget

Platform

Platform	Role	Justification
Facebook	TOFU/MOFU + BOFU : Primary channel	Dominant platform for the 45-55 demographic in France. Desktop-friendly interface aligns with Alain's research behavior. Superior targeting for interest-based and life event (group travel planning). Cost-efficient CPM €3.00. Proven conversion platform for our rugby vertical. Video format drives higher engagement than static for emotional sports content.
Instagram	MOFU/BOFU : Supporting conversion	Reaches Rugby-Alain's social circle and provides visual proof of MYCOMM experiences. Carousel format ideal for detailed package breakdowns. Works synergistically with Facebook retargeting. Strong testimonial showcase platform.

Budget break down per platform and ad type

	Facebook	Instagram	Total
Budget	€2,000 (67%)	€1,000 (33%)	€3,000

Ad Type	Platform	Stage	Budget
Carousel (build trust)	Facebook	TOFU/MOFU	€700
Video (emotional hook)	Facebook	TOFU/MOFU	€500
DPAs (retargeting, carousel)	Facebook	BOFU	€800
Carousel (package showcase)	Instagram	MOFU/BOFU	€400
Testimonial story (consideration)	Instagram	BOFU	€600
Total			**€3,000**

40% of the budget (€1,200) goes to pure TOFU/MOFU, 47% (€1,400) to BOFU, with 13% (€400) serving dual MOFU/BOFU function. This allocation reflects rugby's status as a confirmed vertical, aggressive BOFU investment capitalizes on proven demand and existing brand recognition, while substantial top-funnel spend maintains pipeline health for sustained performance.

2.3 Targetting

Cold audience setup: used for TOFU ads

Parameter	Details
Age	42–58
Location	France (focus: Paris, Lyon, Toulouse, Bordeaux, Marseille)
Language	French
Interests	Rugby, Six Nations, Rugby World Cup, Top 14, European Rugby Champions Cup, France Rugby, Stade Français, Toulouse Rugby, sports travel, premium experiences
Behavior	Travel intenders (international), engaged shoppers, group activity planners
Device	Desktop + Mobile (no exclusions, but desktop expected to dominate)
Demographics	College-educated, household income top 25%

Three ad sets run in parallel on Facebook TOFU/MOFU:

1. **Interest-based targeting** (rugby + sports travel)
2. **Lookalike audience** (3% LAL from MYCOMM's existing French rugby customers)
3. **Life events + behaviors** (upcoming holidays, birthdays, anniversary celebrations, group trip planning signals)

The lookalike audience leverages MYCOMM's proven French rugby customer base, a significant advantage over cold market testing. Life events targeting capture gift-givers and milestone celebrators planning group experiences.

Warm audience setup: used for retargetting/BOFU ads

Signal	Source
Facebook/Instagram video viewers 25%+	Meta native
Facebook/Instagram ad engagers (3+ seconds)	Meta native
Facebook/Instagram profile visitors	Meta native
Website visitors: rugby pages	Meta Pixel
Package page viewers (60+ seconds)	Meta Pixel
Product catalog viewers (specific events)	Meta Pixel + Product Catalog
Add to cart (package inquiry started)	Meta Pixel
Form abandoners	Meta Pixel
Past customers (reactivation)	Customer list upload

DPA-Specific Setup: Dynamic Product Ads require the Meta Pixel tracking user behaviors on MYCOMM.

Technical note: Past customer list enables reactivation campaigns for repeat bookings and referrals, a unique asset unavailable in new market pilots.

Why this targeting works for Alain: Rugby-Alain is a deliberate researcher who won't convert on first touch. He needs to see proof of MYCOMM's expertise, read testimonials, compare packages, and possibly discuss with his friends before submitting a form. Starting with trust-focused content at TOFU builds credibility. As he engages with ads, visits package pages, and reads reviews, he self-selects into the warm pool. The confirmed vertical status means MYCOMM's existing customer reviews and proven track record accelerate trust-building.

2.4 Ad Formats

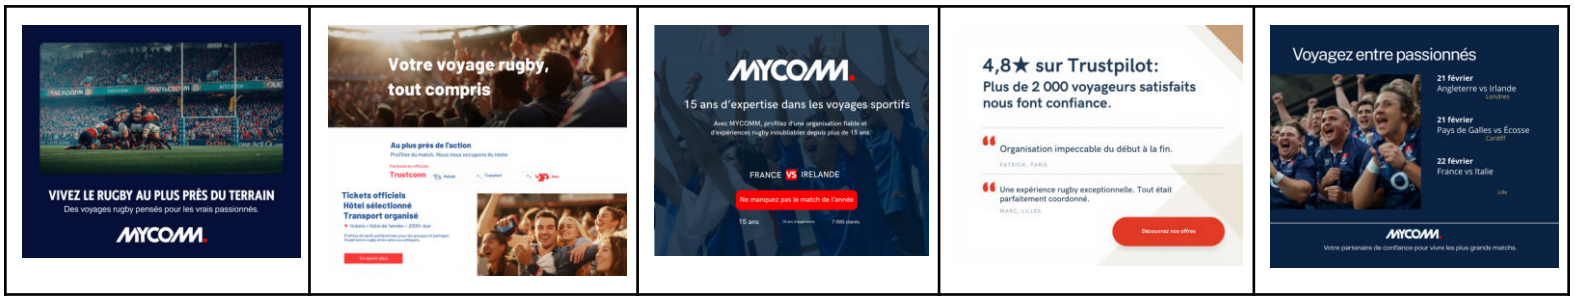
The campaign uses **five assets**, balancing production efficiency with Rugby-Alain's need for comprehensive information and trust signals. Higher budget supports additional creative depth while maintaining strong media spend.

Asset 1: Trust-builder carousel

Format	Carousel - 5 slides
Platform	Facebook
Audience	Cold
Stage	TOFU/MOFU
CTA	"Ne manquez pas le match de l'année"
Slides	1. **Slide 1:** "Au cœur de l'action, au cœur du stade" - Supporter/rugby game visuals 2. **Slide 2:** "Avec MYCOMM, votre partenaire voyages sportifs depuis 15 ans" - logo/visual 3. **Slide 3:** "4.8★ sur Trustpilot - 2,000+ avis" - review screenshot 4. **Slide 4:** "Tout-inclus: tickets + hotel + transport" - icon grid 5. **Slide 5:** "Tarifs de groupe disponible" - pricing comparison visual/visual friends

Professional, information-dense design. Desktop-optimized layout with readable text. Addresses Rugby-Alain's key decision drivers: reliability, official access, hassle-free experience, group value.

Asset 1: [link]

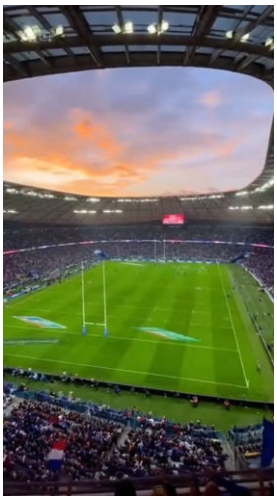


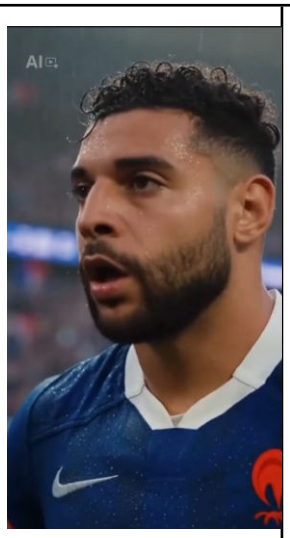
Asset 2: Event video

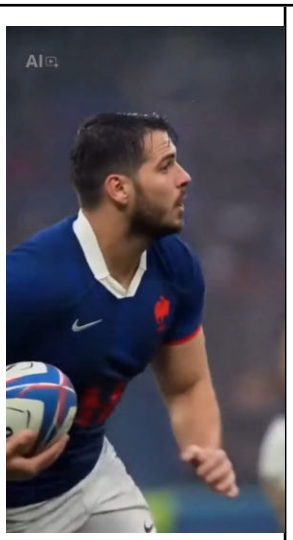
Format	Short video 15-20s
Platform	Facebook
Audience	Cold

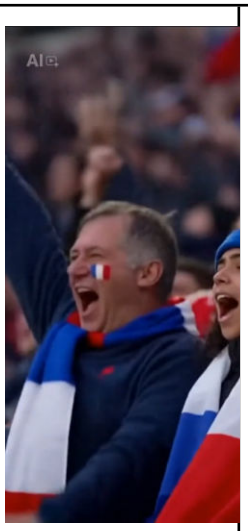
Stage	TOFU/MOFU
CTA	Découvrez nos offres
Video	- Opening (0-3s): Wide rugby stadium shot filling with fans, building anticipation Core moments (3-15s): - French try being scored - crowd eruption - Close-up of French fans' emotional reactions (joy, tension, camaraderie) - Friends celebrating together - Post-match atmosphere - scarves, chanting, shared experience Closing (15-20s): MYCOMM branding with text overlay: "Et si vous viviez l'émotion de plus près ? Vivez le Tournois des 6 Nations au plus près avec MYCOMM"

Asset 2: link (example in a vertical format / final creatives to be adapted to desktop)









Asset 3: DPAs (Dynamic Product Ads)

Format	Carousel - dynamically generated from product catalog
Platform	Facebook
Audience	Warm (product/website viewers)
Stage	BOFU
CTA	"Réservez vos billets"
Visuel	Event-specific stadium/atmosphere photo (depending on page view) Headline: "{event_name} - Pack officiel" (dynamic) Description: "Billets + {accommodation_level} hotel + transfers inclus " (dynamic) Overlay badge: Days-until-event countdown (automated urgency)

Variation	Two versions run simultaneously for different events: ● **Version A:** Six Nations (February/March events) ● **Version B:** Top 14 Finals (June events)

Asset 3 examples - link (examples slides. Final carousel with the dynamic product/game viewed by the visitor)

Asset 4: Package showcase Carousel

Format	Carousel - 4 slides
Platform	Insta
Audience	Cold + Warm
Stage	MOFU/BOFU
CTA	"Et si vous viviez l'émotion de plus près ?"
Slides	1. Six Nations, France-Ireland, 14 Février "Place premium + hotel Paris" 2. Six Nations, France-Angleterre, 21 Mars, "Package Twickenham package + séjour Londres"

	3. Top 14 demi finales, 5 & 6 juin "Assistez à un match de légende" 4. Finales championnats européens, 23 mai "Votre weekend rugby"
Variations	Two versions run simultaneously: identical creative, different CTA: ● **Cold audience CTA:** "En savoir plus" ● **Warm audience CTA:** "Réservez vos billets." Slides are deactivated as each event passes, maintaining current relevance and natural urgency.

Asset 5: Témoignages

Format	Short video (15s) or static image
Platform	Instagram Stories
Audience	Warm
Stage	BOFU
CTA	"Réservez votre expérience"
Vidéos	Real customer testimonial from a previous rugby trip. UGC-style but professionally produced. Interview style at the exit of the game. Example: "C'était extraordinaire. On avait des places parfaites, zéro stress niveau organisation. Des émotions comme prévues. C'était vraiment un weekend inoubliable. On a déjà réservé pour l'année prochaine avec MYCOMM." Marc, Lilles. Includes visual proof: photos of the group at the stadium, ticket close-ups, hotel exterior. Authentic, relatable tone that speaks directly to Rugby-Alain's desire for reliability and social experience.

Why these five assets?

Our Rugby-Alain needs both emotional, sport-engaging content, (video) and informational depth (carousel, testimonials). The experience video captures attention and builds aspiration at TOFU. The trust builder carousel provides the rational justification he needs to progress. DPAs provide the personalized retargeting necessary for high-consideration, multi-event decision-making. The dual-platform approach leverages Facebook's research-friendly environment and video distribution strength while using Instagram for social proof and visual appeal. €3,000 budget supports this creative depth while maintaining 2:1 media-to-creative ratio, ensuring sufficient scale for statistical significance in a confirmed vertical.

2.5 Campaign schedule

The campaign runs over 4 weeks in two phases. Approximately 2 weeks of setup are required before launch.

Ad Type	Platform	Weeks 1-2	Weeks 3-4	Total

Carousel (build trust)	Facebook	€455	€245	€700
Static (event package awareness)	Facebook	€345	€155	€500
DPAs (retargeting, carousel)	Facebook	€150	€650	€800
Carousel (package showcase)	Instagram	€250	€150	€400
Testimonial story (consideration)	Instagram	€100	€500	€600
Total		**€1,300**	**€1,700**	**€3,000**

Weeks 1-2: 43% of budget (€1,300) on cold audiences building warm pool and catalog viewer data for DPAs, with 12% allocated to early BOFU testing (€150 DPA + €100 testimonial). This validates retargeting mechanics, tests DPA catalog setup, and captures highest-intent users immediately.

Weeks 3-4: 57% of budget (€1,700) concentrated on BOFU (€1,150, or 68% of phase budget), capitalizing on mature warm pool and urgency as event dates approach. DPAs receive 4.3x budget increase in this phase, reflecting their superior performance on warmed audiences. TOFU/MOFU continues at 32% to maintain pipeline health.

The aggressive week 3-4 BOFU shift reflects confirmed vertical confidence: conversion pathways are proven, DPA mechanics are validated in week 1-2, and peak booking urgency justifies concentration of spend on ready-to-convert audiences.

2.6 KPI Estimates & Financials

Success criteria:

Awareness & reach (TOFU/MOFU)	**Engagement quality**	**Conversion performance (BOFU)**	**Business Impact**
● Total impressions ● Unique reach ● Video view rate (ThruPlay completions at 15s+) ● Click-through rate (CTR) ● Landing page views	● Cost per click (CPC) ● Click-to-visit rate ● Average time on site ● Pages per session ● Warm audience pool growth rate	● Form submissions (total conversions) ● Cost per lead (CPL) ● Conversion rate (visits → form submissions) ● DPA conversion rate vs generic retargeting	● Booking conversion rate (leads → confirmed bookings) ● Group booking percentage ● Average group size per booking ● Revenue per lead ● Return on ad spend (total revenue / €3,000)

Channel Validation:

- CPL competitive with other acquisition channels
- Video engagement rate indicates format viability
- DPA performance justifies catalog investment
- Group booking dynamics validate targeting approach

If targets are met: Confirms Facebook as scalable channel for rugby vertical, justifies budget increase to €5,000+/month

3. Persona #2: Tom & Natalia (Belgium)

3.1 Context & Objectives

Tom and Natalia, aged 25-34, based in Belgium. They are digitally native, mobile-first tennis enthusiasts who discover new experiences through Instagram and TikTok, motivated by visual and aspirational content.

MYCOMM has no prior brand presence in Belgium. This campaign prioritises awareness and audience building over immediate conversion, introducing MYCOMM to a completely cold audience while capturing early leads from the most engaged users. It is a one-month pilot with a €1,500 budget, designed as the first step in a longer Belgian market development strategy.

Funnel Stage	Objective	KPIs
TOFU/MOFU	Introduce MYCOMM to cold Belgian tennis fans. Build brand recognition and drive first traffic to package pages	Impressions, Reach, Video View Rate, CTR
BOFU	Convert warm audiences into form submissions for tennis travel packages	Form submissions, Cost per Lead (CPL)

Note on ROAS: Tennis packages are booked via a request form, not a direct online purchase. ROAS cannot be calculated. The primary financial metric is **Cost per Lead (CPL)**.

3.2 Platform Selection & Budget

Platform	Role	Justification
TikTok	TOFU/MOFU - Discovery	Primary discovery channel for 25–34 demographic. Short video with CTA drives brand awareness and traffic to package pages.
Instagram	TOFU/MOFU + BOFU	Carries the full funnel via Reels, carousel and retargeting.

	TikTok	Instagram	Total
Budget	€500 (33%)	€1,000 (67%)	€1,500

Ad Type	Platform	Stage	Budget
Experience Video	TikTok	TOFU	€500
Experience Video Reels	Instagram	TOFU	€200
Social Proof Carousel	Instagram	TOFU/MOFU	€200
Testimonial Story	Instagram Stories	BOFU	€250
Tournament Carousel	Instagram	BOFU	€350
Total			**€1,500**

Stage	Budget	Share
TOFU/MOFU	€900	60%
BOFU	€600	40%
Total	**€1,500**	**100%**

60% of the budget goes to TOFU/MOFU reflecting zero prior brand presence in Belgium. Building a warm audience is a prerequisite for any conversion activity. The 40% BOFU allocation is justified by two dedicated conversion assets addressing different psychological triggers: human validation and product specificity.

3.3 Targeting

Cold audience: used for Experience Video, Instagram Reels, Social Proof Carousel/

Parameter	Details
Age	22–35
Location	Belgium
Language	English + French
Interests	Tennis, ATP Tour, Roland Garros, Wimbledon, Rome Open, sports travel, lifestyle
Behaviour	Travel intenders, video content engagers

Two ad sets run in parallel on Instagram TOFU/MOFU: interest-based targeting and a 1% Lookalike audience built from MYCOMM's French website visitors targeted in Belgium. The lookalike audience identifies Belgian users who behave similarly to existing French customers, increasing targeting relevance without requiring prior Belgian market data.

Warm audience: used for used for Testimonial Story and Tournament Carousel

Signal	Source
Instagram video viewers 50%+	Meta native
Instagram ad engagers	Meta native
Instagram profile visitors	Meta native
Website visitors: tennis pages	Meta Pixel

Technical note: TikTok and Meta do not share audience data. However, users who click from TikTok to MYCOMM's website are captured by the Meta Pixel and included in the website visitors audience, meaning the retargeting pool implicitly absorbs TikTok traffic without any direct data sharing.

Why this targeting works for Tom & Natalia

Tom & Natalia are a cold Belgian audience who have never encountered MYCOMM. Starting with broad interest and lookalike targeting ensures maximum relevant reach at TOFU. As they engage with ads, watch videos, and visit the website, they self-select into the warm retargeting pool. By the time they see the BOFU carousel, they have already had multiple brand touchpoints, making the form submission a natural next step rather than a cold ask.

3.4 Ad Formats

The campaign uses four paid assets, each addressing a distinct psychological stage in Tom and Natalia's decision journey.

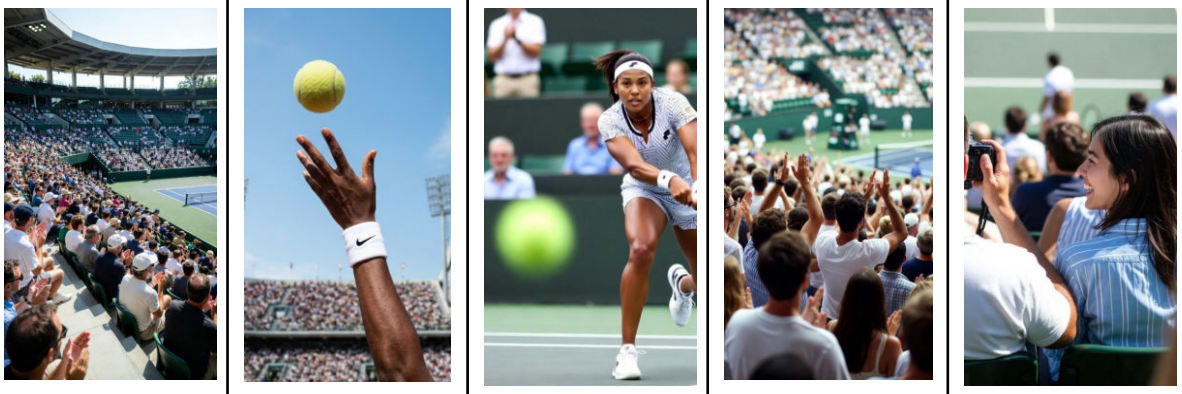
Asset 1: Experience Video

Format	Short video 9-15s
Platforms	TikTok + Instagram Reels
Audience	Cold
Stage	TOFU
CTA	"Discover our tennis packages"
Storyboard	• Stadium shot - full crowd, immersive atmosphere. • Ball toss (slow-motion) - hand tossing ball against sky and stands.

	• Serve action - racket hits ball, ball flies toward camera. • Crowd reaction - fans jump and cheer. • Friends enjoying together - laughter, interaction in stands. • CTA frame - MYCOMM logo + “Discover our tennis packages”.

Real MYCOMM travel experiences at tennis events: crowd atmosphere, court-side moments, emotional reactions. Tone is aspirational but authentic, UGC-inspired. The same asset runs on both platforms with only the caption and CTA adapted natively in each ad manager.

➡ **Asset 1: Experience Video:** link



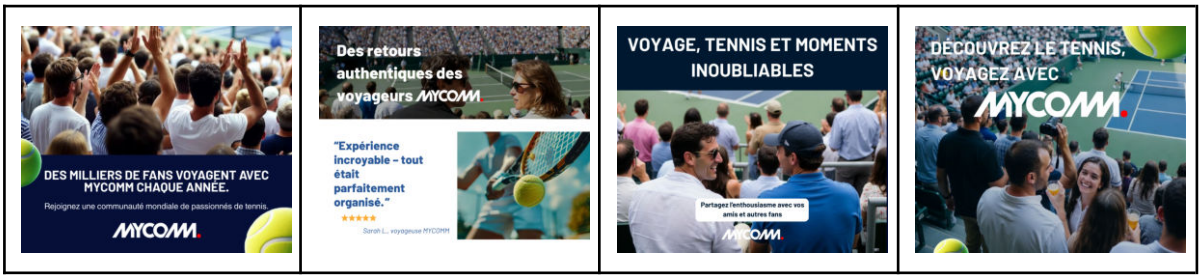
Conceptual flow shows dynamic, shareable content easily produced for TikTok & Instagram Reels.

Asset 2: Social Proof Carousel

Format	Carousel - 4 slides
Platform	Instagram
Audience	Cold
Stage	TOFU/MOFU
CTA	"Discover MYCOMM"
Slides	• **Slide 1** - Fans at a tennis tournament Demonstrates social proof by presenting the scale of MYCOMM’s tennis travel community. • **Slide 2** - Customer testimonial Builds credibility through authentic customer feedback. • **Slide 3** - Friends watching a match Highlights the social and experiential aspect of tennis travel. • **Slide 4** - Tournament atmosphere / package promotion Introduces MYCOMM’s tennis travel packages and encourages exploration of the offer.

Answers the question cold audiences ask after seeing the video: "who are MYCOMM and can I trust them with my trip?" Provides rational validation through peer proof and package clarity without pushing a specific product too early.

➡ **Asset 2: Social Proof Carousel:** link



Asset 3: Testimonial Story

Format	Short video 10–15s
Platform	Instagram Stories
Audience	Warm
Stage	BOFU
CTA	"Book your experience"

Provides human validation that moves a warm audience from consideration to action. By the time they see this asset they already know what MYCOMM offers, they need confirmation that someone like them did it and it was worth it.

Asset 4: Tournament Carousel

Format	Carousel - 4 slides
Platform	Instagram
Audience	Warm
Stage	BOFU
CTA	"Book your experience"

Slide	Tournament	Dates
1	Monte-Carlo Masters	April 6–19

2	Rome Open	May 7–17
3	Roland Garros	May 25 – June 8
4	Wimbledon	June 29 – July 12

Each slide features the tournament name, location, dates, destination visual and package teaser. Slides are deactivated as each tournament passes, keeping the carousel current and creating natural urgency for remaining events.

Provides product specificity and urgency to a warm audience that has already received human validation from the Testimonial Story. The combination of social proof followed by specific product detail is the strongest possible BOFU sequence for a considered purchase.

Organic TikTok Support

The Testimonial Video is also published as an organic post on MYCOMM's TikTok account during Weeks 3-4, providing a zero-budget social proof touchpoint for cold audiences already exposed to the paid Experience Video.

3.5 Campaign Schedule

The campaign runs over 4 weeks in two phases. Approximately 2 weeks of setup is required before launch.

Ad Type	Platform	Stage	Weeks 1-2	Weeks 3-4	Total
Experience Video	TikTok	TOFU	€325	€175	€500
Experience Video Reels	Instagram	TOFU	€130	€70	€200

Social Proof Carousel	Instagram	TOFU/MOFU	€260	€140	€400
Testimonial Story	Instagram Stories	BOFU	—	€250	€250
Tournament Carousel	Instagram	BOFU	—	€350	€350
Total			**€715**	**€785**	**€1,500**

Weeks 1-2: entirely cold audience focused. Budget goes to building brand awareness and accumulating the warm pool. No conversion attempted.

Weeks 3-4: BOFU activates once the warm pool is viable. Testimonial Story and Tournament Carousel launch simultaneously, addressing human validation and product specificity in parallel. TOFU/MOFU continues at reduced spend.

3.6 KPI Estimates & Financials

Benchmarks:

- TikTok CPM €10 / CPC €1.00
- Instagram CPM €2.50 / CPC €0.70
- Click → Visit loss rate: 20%
- BOFU conversion rate: 0.5% (conservative end of brief's 0.5%–2.5% range, reflecting first campaign, cold market and form submission as conversion event)

Ad Type	Platform	Budget	Impressions	Clicks	Visits	Conv. Rate	Conversions	CPL
Experience Video	TikTok	€500	50,000	500	400	N/A	—	—
Experience Video Reels	Instagram	€200	80,000	286	229	N/A	—	—
Social Proof Carousel	Instagram	€200	80,000	286	229	N/A	—	—
Testimonial Story	Instagram Stories	€250	—	357	286	0.5%	1	€250
Tournament Carousel	Instagram	€350	—	500	400	0.5%	2	€175

TOTAL		**€1,500**	**210,000**	**1,929**	**1,544**		**3**	**€200 avg**

Success criteria:

Awareness & reach (TOFU/MOFU) ● Total impressions ● Unique reach ● Video view rate (ThruPlay completions at 15s+) ● Click-through rate (CTR) ● Landing page views	**Engagement quality** ● Cost per click (CPC) ● Click-to-visit rate ● Average time on site ● Pages per session ● Warm audience pool growth rate	**Conversion performance (BOFU)** ● Form submissions (total conversions) ● Cost per lead (CPL) ● Conversion rate (visits → form submissions)	**Business Impact** ● Booking conversion rate (leads → confirmed bookings) ● Return on ad spend (total revenue / €1,500)

If targets are met: Confirms Belgium as a viable new market for MYCOMM's tennis vertical, justifies budget increase toward €1,500/month.

Conclusion

MYCOMM occupies a strong position in the French sports travel market with proven expertise in all-inclusive packages, particularly within the French rugby vertical. However, the current digital acquisition strategy reveals critical dependencies that create both risk and opportunity. The website's extreme reliance on organic search (83.9% of traffic) and concentration of performance in just 22 high-value keywords exposes the business to algorithm volatility, while the dominance of informational intent (68.7% of keywords) indicates a significant untapped opportunity to capture bottom-of-funnel demand. The netlinking profile, with 85% toxic or potentially toxic domains, represents an immediate technical liability that undermines the site's authority despite strong page speed and user experience fundamentals.

The optimization strategy outlined in this report addresses these vulnerabilities through a SEM campaign. On the SEO front, priority actions include toxic backlink disavowal, development of transactional-intent content targeting package-specific queries, and expansion of English-language assets to support international growth in Belgium and Switzerland. The tennis vertical emerges as the highest-efficiency opportunity, generating 17.2% of traffic from only 3.6% of keywords and dominating international markets where rugby has minimal organic presence. Paid search campaigns complement this organic foundation by capturing high-intent match-specific and tournament-specific queries, with campaign structures tailored to market maturity—aggressive BOFU investment in the confirmed French rugby vertical versus awareness-focused budget allocation in the exploratory Belgian tennis market.

Social media advertising extends this funnel strategy across platforms, leveraging Facebook's strength with the desktop-oriented 45-55 demographic for Rugby-Alain while deploying TikTok and Instagram Reels to reach the mobile-first 25-34 audience represented by Tom and Natalia. The €3,000 investment in the confirmed rugby vertical versus €1,500 in the tennis pilot reflects appropriate risk allocation, with BOFU budget weighting adjusted to match market readiness. Critically, the paid social structure builds retargeting pools that activate conversion assets only after sufficient brand exposure, addressing MYCOMM's zero awareness in new markets.

Executing this integrated strategy positions MYCOMM to **diversify revenue** beyond its current rugby concentration, reduce organic search dependency through **multi-channel acquisition**, establish a **defensible presence in high-growth international markets**, and **convert its informational traffic** into commercial outcomes. Success requires immediate netlinking remediation, systematic BOFU content development, and disciplined testing of the Belgium tennis hypothesis before broader international expansion. The framework is designed for iterative optimization, each campaign phase generates performance data that informs budget reallocation, creative refinement, and geographic prioritization in subsequent cycles.
